

SNS COLLEGE OF ENGINEERING

Kurumbapalayam(Po), Coimbatore – 641 107

Accredited by NAAC-UGC with 'A' Grade

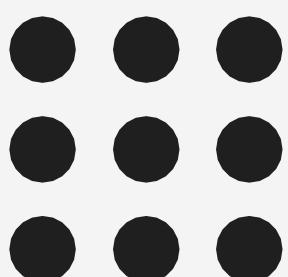

Approved by AICTE, Recognized by UGC & Affiliated to Anna University, Chennai

Department of Information Technology

19CS204 OBJECT ORIENTED PROGRAMMING

I YEAR /II SEMESTER

Topic – final keyword

final

The final keyword in java is used to restrict the access.

The java final keyword can be used in many context.

Final can be:

- Variable (Stop changing values)
- Method (Stop Overriding)
- Class (Stop Inheritance)

final

Variable

- If a variable is declared with the final keyword, its value cannot be changed once initialized.
- If it's declared but not yet initialized, it's called a blank final variable

Example

```
final int=10;
```

```
class FinalVariable {  
    public static void main(String[] args)  
    {  
        final int x = 10;  
        x++;  
        System.out.println(x);  
    }  
}
```

final

```
class example
{
final double pi=3.14;
Example(double pi)
{
this.pi=pi;
}
}

class example1{
public static void main(String []args)
{
example ex=new example(5);
}}
```

final

Final methods

A method, declared with the final keyword, cannot be overridden or hidden by subclasses

Example

```
class A {  
    final void finalmethod() {  
        System.out.println("Cant be overridden");  
    }  
}  
  
class B extends A {  
    void finalmethod() {  
        System.out.println("This is Derived");  
    }  
  
    public static void main(String[] args) {  
        A a=new A();  
        a.finalmethod();  
        B b= new B();  
        b.finalmethod();  
    } }
```

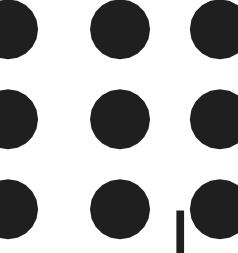

final

Final Class

A class declared as a final, cannot be extended or Inherited by another class.

Example

```
final class A {  
    void finalmethod() {  
        System.out.println("This is Final Class Cannot Inherited");  
    }  
}  
  
class B extends A {  
    void finalmethod() {  
        System.out.println("This is Derived");  
    }  
}  
  
public static void main(String[] args) {  
    A a=new A();  
    a.finalmethod();  
    B b= new B();  
    b.finalmethod();  
}
```

THANK YOU
