## Problem 1:

A man can pull horizontally with a force of 450 N . A mass of 350 kg is resting on a horizontal surface for which the coefficient of friction is 0.20 . The vertical cable of a crane is attached to the top of the block as shown in Figure. what will be the tension in the cable if the man is just able to start the block to right.

## Solution:

Given

$$
\mu=0.2 ; \text { mass }=350 \mathrm{~kg}==350 \times 9.8=3430 \mathrm{~N}
$$

External force $\mathrm{P}=450 \mathrm{~N}$ towards right conditions of equilibrium.

$$
\begin{array}{ll}
\sum H=0 & 450-F_{m}=0 \\
& F_{m}=450 \mathrm{~N} \\
\sum V=0, & N_{R}+T-3430=0 \\
& N_{R}=3430-T
\end{array}
$$

w.k.t

$$
\begin{aligned}
& F_{m}=\mu N_{R} \\
& 450=0.2(3430-\mathrm{T}) \quad \therefore \mathrm{T}=1180 \mathrm{~N}
\end{aligned}
$$

## Problem 2:

Block(2) rests on a block(1) and is attached by a horizontal rope $A B$ to the wall as shown in Figure what force P is necessary to cause motion of block(1) to impend? The coefficient of

SNS COLLEGE OF ENGINEERING<br>Kurumbapalayam (Po), Coimbatore - 641107<br>Accredited by NAAC-UGC with 'A' Grade<br>Approved by AICTE \& Affiliated to Anna University, Chennai

friction between the blocks is $1 / 4$ and between the floor and block(1) is $\frac{1}{3}$. Mass of blocks(1) and (2) are 14 kg and 9 kg respectively.

Solution :

$$
\begin{gathered}
\mathrm{W}_{1}=14 \mathrm{~kg}=14 \times 9.8=137.2 \mathrm{~N} \\
\mathrm{~W}_{2}=9 \mathrm{~kg}=9 \times 9.8=88.2 \mathrm{~N} \\
\mu_{1}=\frac{1}{3} ; \mu_{2}=\frac{1}{4}
\end{gathered}
$$

Consider block(2)

$$
\begin{gathered}
\sum \mathrm{H}=0 \quad \mathrm{~T}-\mathrm{F}_{2}=0 \\
\mathrm{~T}-\left(\mu_{2} \cdot \mathrm{~N}_{2}\right)=0 \\
\mathrm{~T}-\left(\frac{1}{4}-\mathrm{N}_{2}\right)=0 \rightarrow(1) \\
\sum \mathrm{V}=0 \\
\mathrm{~N}_{2}-88 \cdot 2=0
\end{gathered}
$$

SNS COLLEGE OF ENGINEERING

$$
\mathrm{N}_{2}=88.2 \mathrm{~N}
$$

Sub $N_{2}$ in (1)

$$
\mathrm{T}=22.05 \mathrm{~N} \text { ( or) } \mathrm{F}_{2}=22.05 \mathrm{~N}
$$

Consider block (1)

$$
\begin{gathered}
\sum \mathrm{H}=0 \\
\mathrm{~F}_{1}+\mathrm{F}_{2}-\mathrm{P} \cos 45=0 \\
22.05+\left(0.333 \times \mathrm{N}_{1}\right)=\mathrm{P} \cos 45 \rightarrow(2) \\
\mathrm{V}=0 \\
\mathrm{~N}_{1}+\mathrm{N}_{2}-\mathrm{W}_{1}+\mathrm{P} \sin \theta=0 \\
\mathrm{~N}_{1}-88.20-137.2+\mathrm{P} \sin 45=0 \\
88.2 \times \ldots
\end{gathered}
$$

$P \sin 45=225.4-N_{1} \rightarrow(3)$
$\frac{(3)}{(2)} \Rightarrow \frac{\not \subset \sin 45}{P \cos 45}=\frac{225.4-\mathrm{N}_{1}}{22.05+0.333 \mathrm{~N}_{1}}$

$$
\tan 45=\frac{225.4-\mathrm{N}_{1}}{22.05+\left(0.333 \times \mathrm{N}_{1}\right)}
$$

Solving this we get

$$
\mathrm{N}_{1}=152.55 \mathrm{~N}
$$

Sub $\mathrm{N}_{1}$ in (2)

$$
\mathrm{P}=103 \mathrm{~N}
$$
