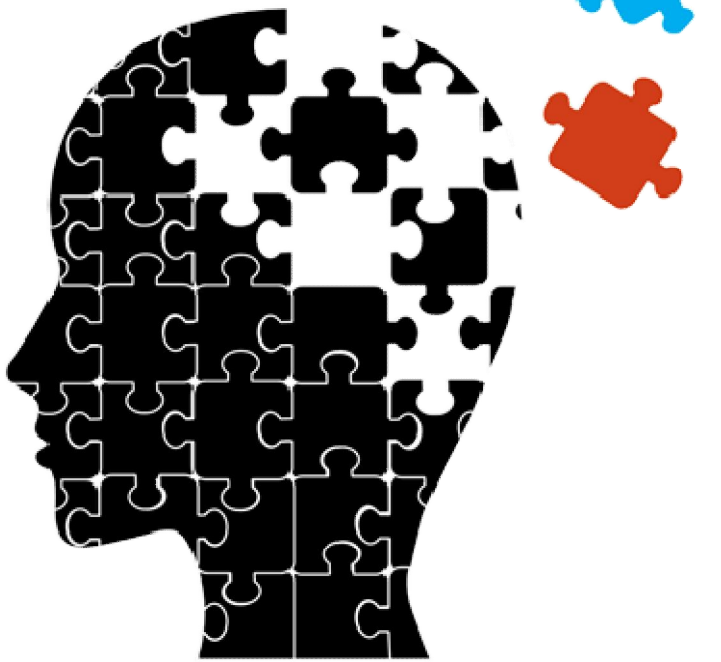
UNIT I
BASIC STRUCTURE OF COMPUTERS

Functional units – Basic operational concepts – Bus Structures – Performance – **Memory locations and addresses** – **Memory operations** – Instruction and Instruction sequencing — Addressing modes – Assembly language – Case study : RISC and CISC Architecture.

Recall the previous class concepts



Memory locations and addresses

- Determine how the computer's **memory is organized so that the user can efficiently store or retrieve information** from the computer.
- Memory consists of many **millions of storage cells (flip-flops).**
- Each cell can **store a bit of information i.e. 0 or 1**

Memory locations and addresses

- Each group of n bits is referred to as a word of information, and n is called the word length.
- The word length can vary from 8 to 64 bits.
- A unit of 8 bits is called a byte.
- Accessing the memory to store or retrieve a single item of information (word/byte) requires distinct addresses for each item location. (0 through 2^k-1 as the addresses of successive-locations in the memory).

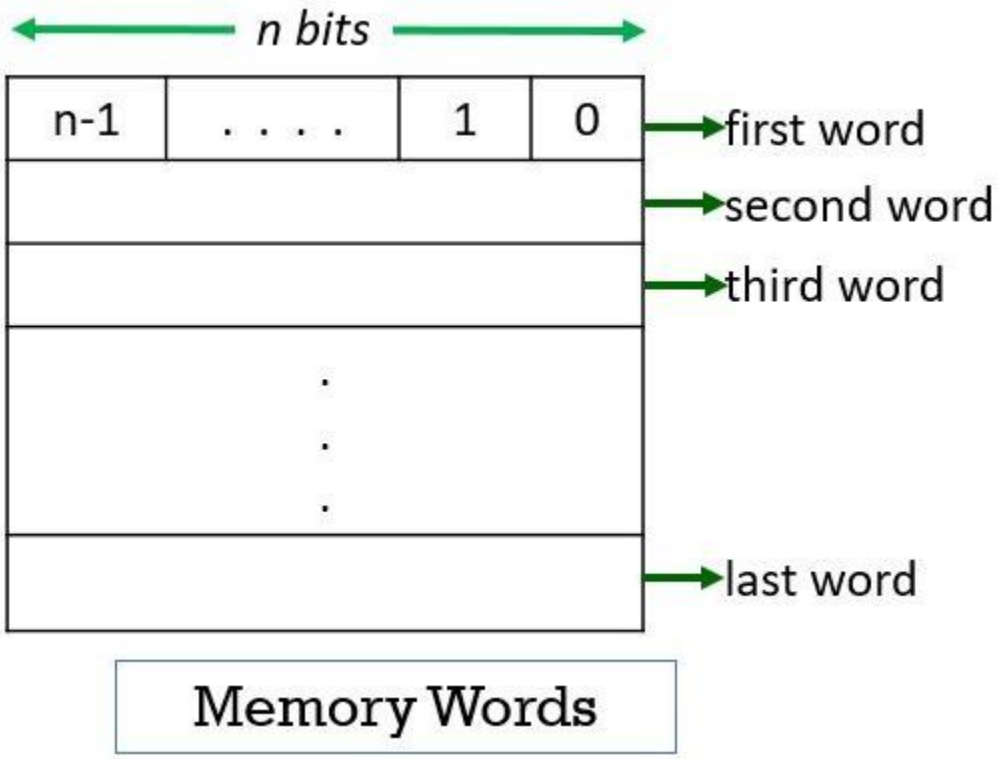
Memory locations and addresses

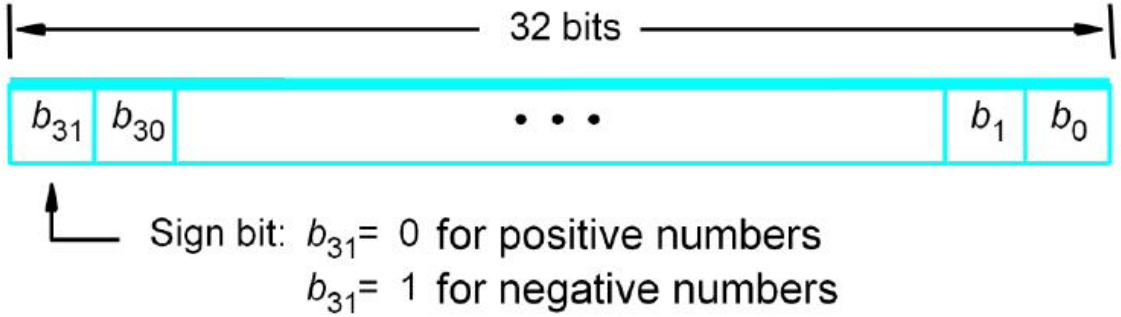
- If 2^k = no. of addressable locations; then 2ˆk addresses constitute the address-space of the computer.
- For example, a 24-bit address generates an address-space of 2ˆ24 locations (16 MB).
- A 32-bit address creates an address space of 2^{32} or 4G (4 giga) locations.

Byte Addressability

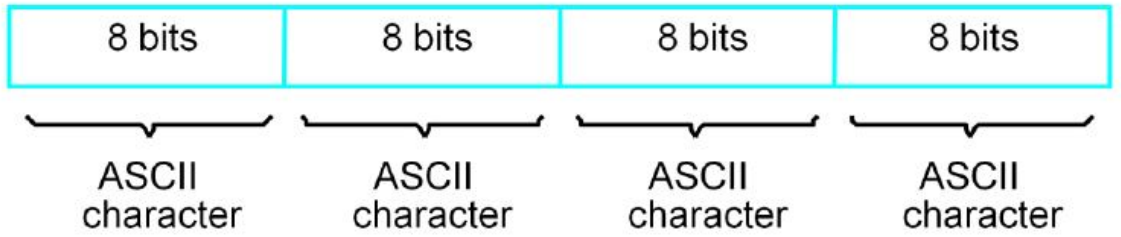
- A byte is always 8 bits, but the word length typically ranges from 16 to 64 bits.
- In byte-addressable memory, successive addresses refer to successive byte locations in the memory.
- Byte locations have addresses 0, 1, 2. . . . .
- If the word-length is 32 bits, successive words are located at addresses 0, 4, 8. . with each word having 4 bytes.

Byte Addressability





(a) A signed integer



(b) Four characters

Big-Endian and Little-Endian Assignments in Byte Addresses

- Big-Endian – is used when lower byte addresses are used for the more significant bytes of the word
- Little- Endian – is used when lower byte addresses are used for the less significant bytes of the word

Storage of the value $D7C4_{16}$

ig Endian

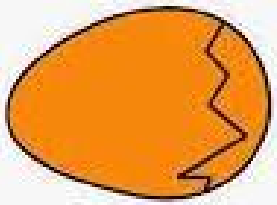
torola Processors:
000, 68030, etc...

0	1
7	C4

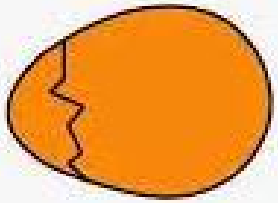
Little Endian

Intel Processors: 80386, Pentium, etc...

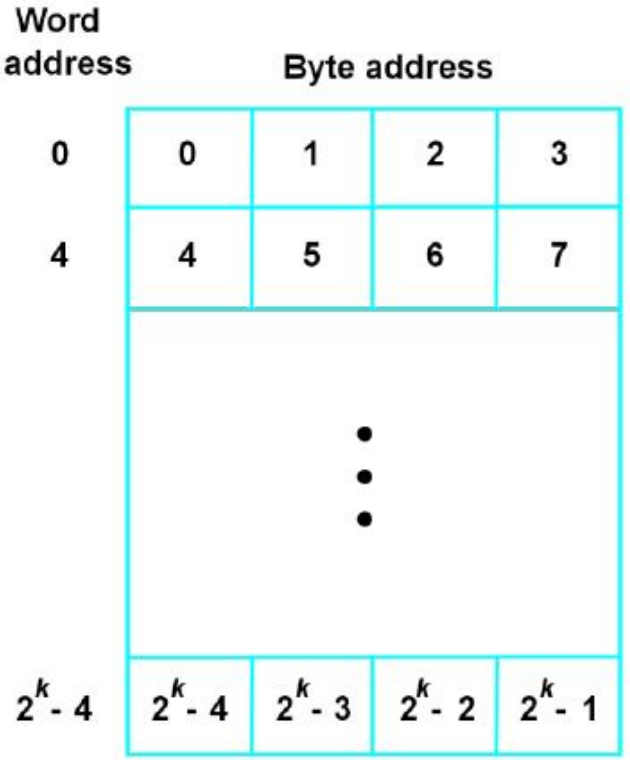
0	1
C4	D7



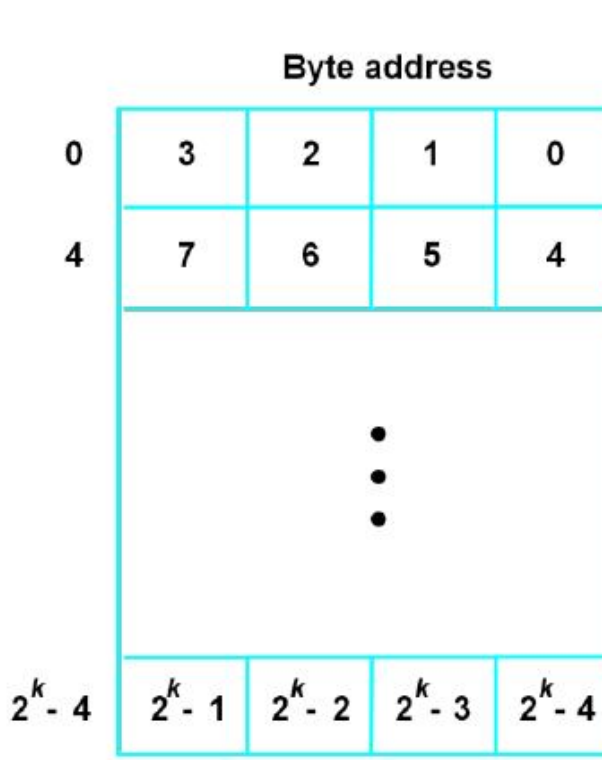
BIG ENDIAN - The way people always broke their eggs in the Lilliput land



LITTLE ENDIAN - The way the king then ordered the people to break their eggs



(a) Big-endian assignment



(b) Little-endian assignme

Memory Operations

- Two basic operations are:
  - ✓ Load (or Read or Fetch)
  - ✓ Store (or Write)

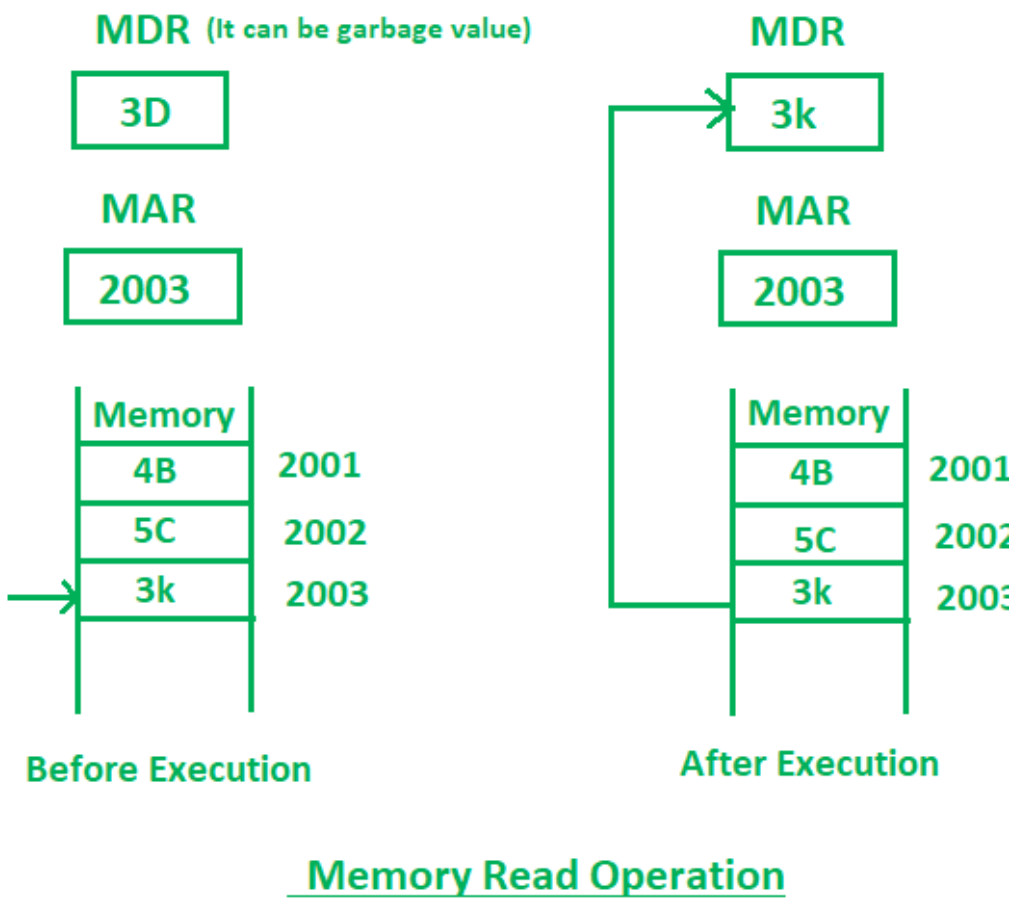
Load Operations

Transfers a copy of the contents of a specific memory location to the processor

Memory contents remain unchanged

Processor sends the address of the desired location to the memory and request that its contents be read

Memory reads the data stored at that address and sends them to the processor



Memory Read Operation

QUIZ

1. What is computer architecture?

   a) set of categories and methods that specify the functioning, organization, and implementation of computer systems

   b) set of principles and methods that specify the functioning, organization, and implementation of computer systems

   c) set of functions and methods that specify the functioning, organization, and implementation of computer systems

   d) None of the mentioned

QUIZ

2. To reduce the memory access time we generally make use of _____

a) SDRAM's

b) Heaps

c) Cache's

d) Higher capacity RAM's

QUIZ

3. Who developed the basic architecture of computer?

a) Blaise Pascal

b) Charles Babbage

c) John Von Neumann

d) None of the above

QUIZ

4. Which of the following allows simultaneous write and reac operations?

a) ROM

b) EROM

c) RAM

d) None of the above

QUIZ

5. Computer address bus is

a) Multidirectional

b) Bidirectional

c) Unidirectional

d) None of the above

QUIZ

6. Which of the following is a way in which the components of a computer are connected to each other?

a) Computer parts

b) Computer architecture

c) Computer hardware

d) None of the above

QUIZ

7. Which of the following circuit convert the binary data into a decimal?

a) Decoder

b) Encoder

c) Code converter

d) Multiplexer

QUIZ

8. The address in the main memory is known as -

a) Logical address

b) Physical address

c) Memory address

d) None of the above

QUIZ

9. The collection of 8-bits is called as -

a) Byte

b) Nibble

c) Word

d) Record

QUIZ

10. Which of the following register can interact with the secondary storage?

a) PC

b) MAR

c) MDR

d) IR

QUIZ

11. Which of the following register keeps track of the instructions stored in the program stored in memory?

a) Accumulator

b) Address Register

c) Program Counter

d) Index Register

QUIZ

12. Which of the following is correct about memory and storage?

a) Memory is temporary, Storage is temporary

b) Memory is temporary, Storage is permanent

c) Memory is permanent, Storage is temporary

d) Memory is slow, Storage is Fast
