

Practical Consideration

In addition to all of the basic principles of planning discussed, the following practical points should also be taken into account.

Future Extention: Future extension is a very important point, and that should consider before creating any planning. The planning should be done in such a way that future extension should be possible without affecting the existing building.

Comfort: The first and last priority is always to provide comfort to the occupants. The plan should be such that it does not affect the comfort of the occupants.

Size of the Room: The room sizes should be kept as large as possible. A large room can be shortened by providing **partition walls**, but a small room cannot be simply expanded.

Elevation: As far as possible the elevation of the building should be made simple but attractive.

Stability: The building should be strong enough to withstand the adverse effects of rain, wind, storm, snow, etc.
