

Lesson – 3

Revision worksheet 1

Fill in the blanks

1. The liquid that we feel in our mouth that helps our teeth to chew food better, is called the _____.
2. The food pipe is also called the _____.
3. Peristalsis in the _____ that pushes food towards the stomach.
4. _____ is a long tube-like organ that absorbs the nutrients.
5. The undigested food from the small intestine is sent to the _____.
6. The _____ stores the partially digested food for some time.
7. Chewed food from the mouth enters the _____.
8. _____ help chew the food and break it into smaller particles.
9. The faeces is expelled from our body through the _____.
10. Small intestine secretes _____ that helps in digestion.
11. The main function of the large intestine is to absorb excess _____.
12. The walls of the _____ absorb nutrients from digested food.

Write True or False.

1. Saliva is present in the food pipe.
2. The digestion is completed in the small intestine.
3. Teeth are part of the digestive system.
4. The food pipe is also called the oesophagus.
5. Peristalsis is the contraction and relaxation of muscles of the digestive organs that help movement of food through the entire system.
6. Nutrients are absorbed by the blood through the walls of the small intestine.
7. Small intestine absorbs excess water from the undigested food.
8. The process of digestion can be complete even without chewing the food.

Lesson – 3

Revision worksheet 2

1. The food reaches the _____ through the food pipe.

- a) stomach b) mouth c) intestine d) Anus

2. The bile comes from the _____.

- a) food pipe b) small intestine c) large intestine d) Liver

3. Nutrients from the small intestine go into the _____ which takes them to other parts of the body.

- a) large intestine b) blood c) liver d) Stomach

4. The greenish-yellow liquid is the _____.
- a) blood b) bile c) saliva d) Urine
5. Digestion begins in the _____
- a) oesophagus b) anus c) intestine d) Mouth
6. Digestion gets completed in the _____.
- a) oesophagus b) small intestine c) large intestine d) Mouth
7. Undigested food from the small intestine goes to the _____.
- a) oesophagus b) small intestine c) large intestine d) Mouth
8. The _____ carries the nutrients to all the parts of the body.
- a) saliva b) blood c) intestine d) Anus
9. The undigested food is made to a solid waste called faeces. This happens in the _____.
- a) large intestine b) small intestine c) stomach d) liver

Lesson – 3

Revision worksheet 3

- 1) Which parts in the mouth help us with digestion?
- 2) What is the first step in digestion?
- 3) How does bile help in digestion?
- 4) Name the organs of the digestive system.
- 5) Define digestion.
- 6) What is the role of saliva in the process of digestion?
- 7) How does the small intestine help to digest the food we eat?
- 8) What is the role of the large intestine?
- 9) How does our body get nutrients from the digestion of food?
- 10) What is defecation?
- 11) What happens in the mouth during digestion?
- 12) How does peristalsis help in the process of digestion?
- 13) What happens in the mouth when we eat food?
- 14) How do the nutrients reach other parts of the body?
- 15) What happens after the digestion is complete in the large intestine?
- 16) What is defecation?
- 17) What happens if you stand upside down while eating your food?
