# **SNS ACADEMY** REVISION FULL PORTION - BIOLOGY

10th Standard

Science

Date : 04-Dec-23 Reg.No. :

Total Marks : 30

Exam Time : 00:45:00 Hrs

SECTION A

1) The filtration units of kidneys are called

(a) Ureter (b) Urethra (c) Neurons (d) Nephrons

2) Lack of oxygen in muscles often leads to cramps among cricketers. This results due to

(a) Conversion of pyruvate to ethanol (b) Conversion of pyruvate to glucose

(c) Non conversion of glucose to pyruvate (d) Conversion of pyruvate to lactic acid

3) Electrical impulse travels in a neuron from

- (a) Dendrite  $\rightarrow$  axon  $\rightarrow$  axonal end  $\rightarrow$  cell body (b) Cell body  $\rightarrow$  dendrite  $\rightarrow$  axon  $\rightarrow$  axonal end
- (c) Dendrite  $\rightarrow$  cell body  $\rightarrow$  axon  $\rightarrow$  axonal end (d) Axonal end  $\rightarrow$  axon  $\rightarrow$  cell body  $\rightarrow$  dendrite
- 4) Peripheral nervous system constitutes:
- (a) Neurons and cranial nerves (b) Cranial and spinal nerves (c) Backbone and brain
- (d) Neurons and brain

5) The simple animals like Plana ria can be cut into a number of pieces and each piece grows into a complex organism. What is the process known as?

(a) Budding (b) Fragmentation (c) Spore formation (d) Regeneration

6) What is the probability that a human progeny will be a boy

(a) 50% (b) 56% (c) 47.34% (d) It varies

7) Which of the following is an example of non-biodegradable substance?

(a) Virgin plastic (b) Plastic (c) Plants (d) Plant products

SECTION A1

8) Assertion: The movement of water and dissolved salts in xylem is always upwards.

**Reason**: The upward movement of water is due to low pressure created by transpiration.

### Codes

- (a) Both A and R are true and R is correct explanation of the assertion.
- (b) Both A and R are true but R is not the correct explanation of the assertion.
- (c) A is true but R is false.
- (d) A is false but R is true.

9) **Assertion:** A heterozygous tall plant when crossed with homozygous dwarf plant will produce tall and dwarf plants in the ratio of 3 : 1.

**Reason:** A heterozygous tall plant will produce two types of gametes, i.e., one with T and other with t whereas homozygous dwarf plant produce all gametes with t only.

#### Codes:

(a) Both A and R are true and R is correct explanation of the assertion(b) Both A and R are true but R is not the correct explanation of the assertion(c) A is true but R is false(d) A is false but R is true.

SECTION B

10) What are the components of the transport system in highly organised plants?11) What is reflex action? Describe the steps involved in a reflex action12) A new born has an XX pair of chromosomes. What is the sex of the new born baby?

#### SECTION C

13) What are hormones? State one function of each of the following hormone

(i) Thyroxin

(ii) Insulin.

14) (a) List two reasons for the appearance of variations among the progeny formed by sexual reproduction.

- (b) (i) Name the part marked 'A ' in the diagram.
- (ii) How does 'N.reaches part 'B'?
- (iii) State the importance of the part 'C'.

(iv) What happens to the part marked 'D' after fertilisation is over?

SECTION D

15) Various components of an ecosystem maintain a balance in nature. Disturbance in any component of the environment cause an imbalance. One of the main environmental problem caused by human activities is global warming. Global warming is a phenomenon caused by the increasing concentration of greenhouse gases in the atmosphere resulting due to enhanced greenhouse effect.

(i) Refer to the given pie chart showing the contribution of different gases to global warming.

Identify gases P, Q, Rand S and select the incorrect statement regarding them.

- (a) P could be a gas that increases in atmosphere due to excessive use offossil fuel.
- (b) Q could be a gas produced by complete combustion of biomass.

(c) R could be synthetic gaseous compounds used as refrigerants in air conditioners and refrigerators.

(d) S could be a gas produced by combustion of nitrogen rich fuel.

(ii) What could not be a source of gas Q given in the above pie chart?

- (a) Flooded paddy field (b) Cattle
- (c) Jet fuel (d) Marshes

(iii) If there is no  $CO_2$  in the atmosphere, then what will be the most likely consequence of this on the temperature of earth?

- (a) The temperature remain unchanged as it depends upon the oxygen content of the atmosphere.
- (b) The temperature would increase as less greenhouse gases will be absorbed by  $CO_2$
- (c) The temperature would decrease as  $CO_2$  is the principal greenhouse gas.
- (d) None of these

(iv) Study carefully the following figure representing greenhouse effect.

Select the correct statement regarding this.

(a) Much of the long wavelength infrared radiations re-radiated by the earth's surface are absorbed

by the atmospheric greenhouse gases.

- (b)  $CO_2$ ,  $CH_4$ , CFCs and  $N_2O$  are the gases which are responsible for greenhouse effect.
- (c) The atmosphere is transparent to the incoming short-wavelength radiations and is translucent

to the long-wavelength infra-red radiations.

(d) All of these (v) Greenhouse effect is due to

(a) accumulation of  $O_3$  and (b) accumulation of

depletion of CO<sub>2</sub> both O<sub>3</sub> and CO<sub>2</sub>

(c) accumulation of  $CO_2$  and (d) presence of green

depletion of  $O_3$ plants on the earth

## SECTION E (EITHER OR TYPE)

16) Explain the important of soil for plant growth.

17) (i) What is genetics?

(ii) Give the common name of the plant on which Mendel performed its experiments.

(iii) What for did Mendel use the term factors and what are these factors called now?

(iv) What are genes? Where are the genes located?
