

# **SNS COLLEGE OF ALLIED HEALTH SCIENCE**

Affiliated to The Tamil Nadu Dr MGR Medical University, Chennai

## **DEPARTMENT OF CARDIOPULMONARY PERFUSION CARE TECHNOLOGY**

**COURSE NAME:** Anatomy

**UNIT II – Thorax and Lungs**

**TOPIC:** Ribs

**FACULTY NAME:** Mrs. Saranyaa Prasath

# Empathize - Overview of Ribs – Basic Facts

- 12 pairs of curved, flat bones forming the thoracic cage.
- Total: Approximately 24 ribs in adults.
- They are curved strip of bones
- Ribs stretches from thoracic vertebra (posterior) to lateral edge of sternum (anterior)

## Overview of Ribs – Primary Functions

- Protect vital organs: Heart and lungs.
- Provide structural support for thorax (pectoral girdle and upper limbs)
- Enable dynamic movement for breathing (inspiration and expiration)
- Articulate with thoracic vertebrae T1-T12

## Define - Thoracic Cage

- Thoracic Cage is a skeletal framework which supports the thorax.
- It's nature is osteocartilaginous and elastic.
- The thoracic vertebrae, ribs, costal cartilages, and sternum form the thoracic cage.

## Ideate - Categorization

Characteristics	Features
According to features	Typical ribs: 3 <sup>rd</sup> - 9 <sup>th</sup> , Atypical ribs: 1 <sup>st</sup> , 2 <sup>nd</sup> , 10 <sup>th</sup> , 11 <sup>th</sup> , and 12 <sup>th</sup> .
According to relationship with the sternum	True ribs: 1 <sup>st</sup> -7 <sup>th</sup> , False ribs: 8 <sup>th</sup> -10 <sup>th</sup> , Floating ribs: 11 <sup>th</sup> - 12 <sup>th</sup>
According to articulation	Vertebro-sternal ribs: 1 <sup>st</sup> -7 <sup>th</sup> , Vertebro-chondral ribs: 8 <sup>th</sup> -10 <sup>th</sup> , Vertebral (floating) ribs: 11 <sup>th</sup> and 12 <sup>th</sup>

# Costal Cartilages

- The anterior ends of first 7 ribs are joined to the sternum via their costal cartilages.
- The cartilages at the anterior ends of 8th, 9th, and 10th ribs are joined to the next higher cartilage.
- The anterior ends of 11th and 12th ribs are free and hence named floating ribs.

## Define - Structure of the Typical Rib

- Focus on ribs **3-9**: Standard curved, flat bone.
- **Posterior**: Vertebral end; **Anterior**: Cartilage.
- **Length**: Peaks at 7th rib (~25 cm)
- External convexity, internal concavity.
- Twists along shaft for optimal mechanics.
- **2 Surfaces** : Anterior and Posterior
- **2 Borders**: Superior and Inferior

## Parts of Typical Rib

- **Head:** Wedge-shaped; 2 facets (superior to lower vertebra, inferior to own); crest separates.
- **Neck:** 2-3 cm flat constriction; downward-angled; links head to tubercle.
- **Tubercle - pierced by foramina:** Neck-shaft prominence; articular facet (to transverse process); rough non-articular (ligaments).

## Parts of Typical Rib

- **Angle:** 5-8 cm bend from tubercle; back muscle attachment.
- **Shaft:** Curved body; convex external, concave internal; twists; max length ~25 cm (7th rib), width 1-2 cm.
- **Costal Groove:** Inferior shaft groove; shields neurovascular bundle (VAN: vein-artery-nerve below).
- **Costal Cartilage:** Anterior hyaline extension; flexible, age-ossifying; aids breathing.

# Anterior End & Posterior End

## Anterior End

- It is lower than the vertebral end.
- Presents as a cup shaped depression, which articulates with own costal cartilage

## Posterior End - Head

	Posterior End - Head
<b>Features</b>	<ul style="list-style-type: none"> <li>• Crest separates Upper &amp; Lower Facet</li> <li>• Lower Facet – Articulate with thoracic vertebra</li> <li>• Upper Facet – Articulate with Vertebra above</li> </ul>
<b>Attachments</b>	Capsular ligament, Radiate Ligament, Intra-articular ligament

(c) Superior view of the articulation between a rib and a thoracic vertebra

## Posterior End

Neck	
<b>Features</b>	<ul style="list-style-type: none"> <li>• It continues with head</li> <li>• It has length about 2.5cm</li> <li>• Upper border of neck is called crest</li> <li>• Tubercle – Demarcation between neck &amp; shaft</li> <li>• Tubercle presents with Medial articular &amp; Lateral Non- articular part.</li> </ul>
<b>Attachments</b>	Superior, Inferior, Lateral Costotransverse Ligament, Internal Intercostal Membrane, Costal Pleura.

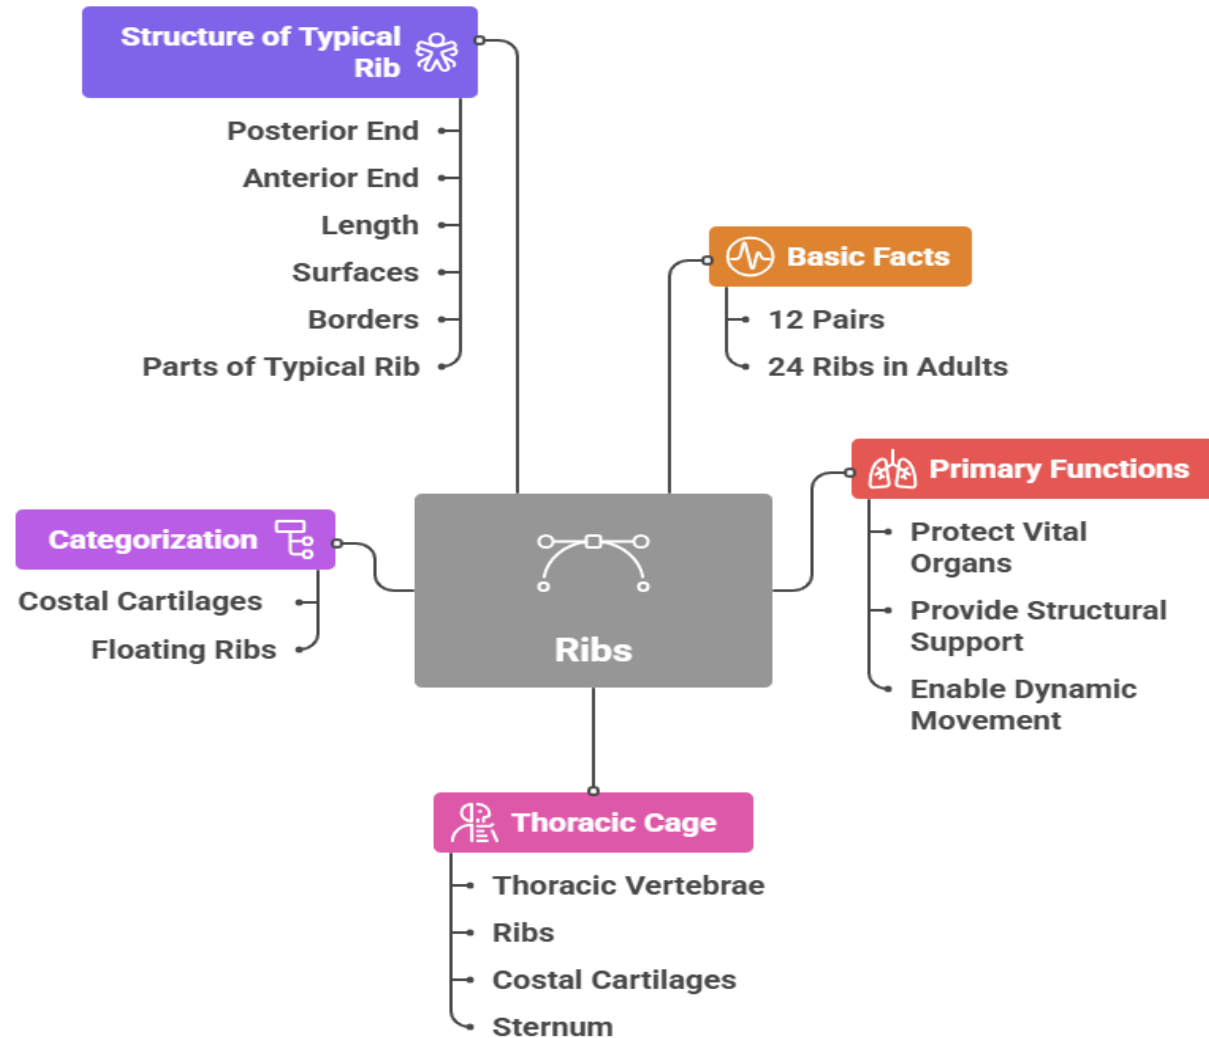

## Posterior End

### Shaft

Features	<ul style="list-style-type: none"> <li>• It is a flat, bend &amp; twist</li> <li>• Outer – Convex, Inner – Concave</li> <li>• 5cm from tubercle is the angle of rib</li> <li>• Costal groove – present on the lower border</li> </ul>
Attachments	External Oblique Abdominis, Serratus Anterior, Latissimus Dorsi, Intercostalis Intimus, Intercostalis Internus, Intercostalis Externus.
