

COMPONENTS OF IOT

CH 17 AUTOMATED ASSEMBLY SYSTEMS

Sections:

1. Fundamentals of Automated Assembly Systems
2. Quantitative Analysis of Assembly Systems

**“IF YOU DON'T BUILD
YOUR DREAM,
SOMEONE ELSE WILL
HIRE YOU TO HELP
THEM BUILD THEIRS”**

-Dhirubhai Ambani

INTERNET OF THINGS |

A Place Where
Machines talk to
Machines

COMPUTING

Using computers to accomplish tasks that are usually time consuming or not possible by humans

COMPUTING

Uses

- Business
- Education
- Entertainment
- Home
- Medical

The most commonly used feature in all of this is **Communication** ie. **Networks**

NETWORKS

The term networks/web is derived from the spiders web

The web is nothing but a series of interconnected computers

These interconnected computers are

Also called as networks

WHAT IS IOT?

Imagine yourself **ten** years from now!! How would you like **technology** to help your **every walk of life?**

How would you be in a world where everything is connected?

IoT

What is IoT ?!

THE INTERNET OF THINGS

- The term Internet of Things was first used by **Kevin Ashton** in 1999.
- Refers to uniquely identifiable objects (things) and their **virtual representations** in an **Internet-like structure**

INTRODUCTION

IoT – Internet of Things.

- Internet – communication through network (wire, wireless, satellite, etc.)
- Things – electronic devices (mobile, computer, sensor devices, etc.)

IOT – INTERNET OF THINGS

The Internet of Things (IoT) is a system of interrelated **computing devices**, **mechanical and digital machines**, **objects**, **animals** or **people**

They are provided with unique identifiers (**IP Addresses**) and the ability to transfer data over a network without requiring **human-to-human** or **human-to-computer** interaction.

Examples:
Traffic Information

Old Mo

Accidents time traffic

CONCEPTS

CONCEPTS

➤ Smart Sensor = Sensor +
interfacing circuit

Capable of

- ❖ logic functions,
- ❖ Two-way communication,
- ❖ making decisions.

CONCEPTS

➤ Artificial Intelligence

➤ Machine Learning Algorithms -

Predictive Modeling,

➤ Data Analytics

Provides the ability to learn without being explicitly programmed.

AI-ARTIFICIAL INTELLIGENCE

Old Machine – Do what I told(Do same work)

But AI – Smart Sensors

Ex: Light

AI-ARTIFICIAL INTELLIGENCE

Any system that exhibits behavior
that could be interpreted as human
intelligent

Sophia

– Citizenship (Saudi Arabia)

AI

Everything is controlled by Computers..

Google can decide Which website u watch

YouTube can decide Which video u watch

Ex. 1. **Mobile can decide to**

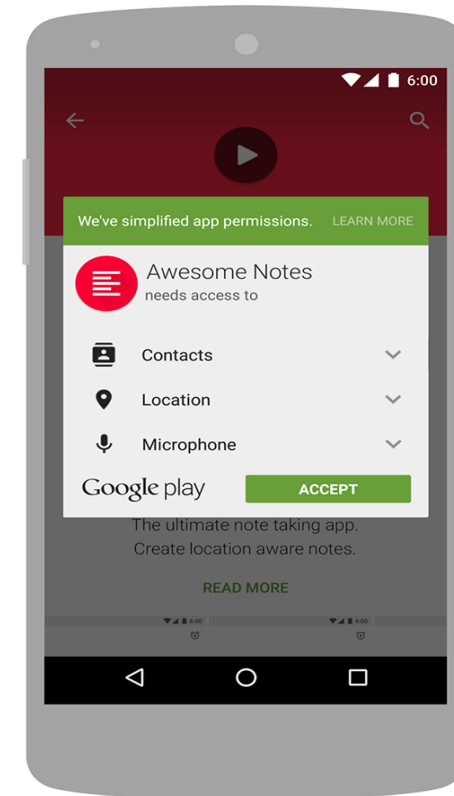

Change your contact number .

2. AMAZON

(cancer-pain relief)

3. Crime Prevention

That information
cannot delete

Machines are good at forming symbolic connections...

You cannot call these symbolic connections as real intelligence

- John Sorrell, 1980

STRONG AI & WEAK AI

Strong AI

Machines displays all the person- like
behaviour

Weak AI

- Machine is confined to a very narrow task
- Small personal assistant – Siri, Ok Google, Cortana

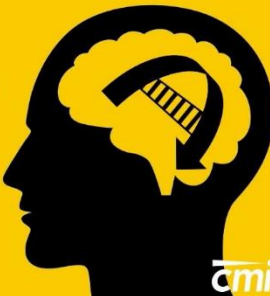

EXPERT SYSTEM

Expert Systems Disappeared in Late 90s...

Then Came Heuristics....

To simplify the decision-making process,
we use
HEURISTICS
also referred to as 'rules of thumb'
or 'cognitive shortcuts.'

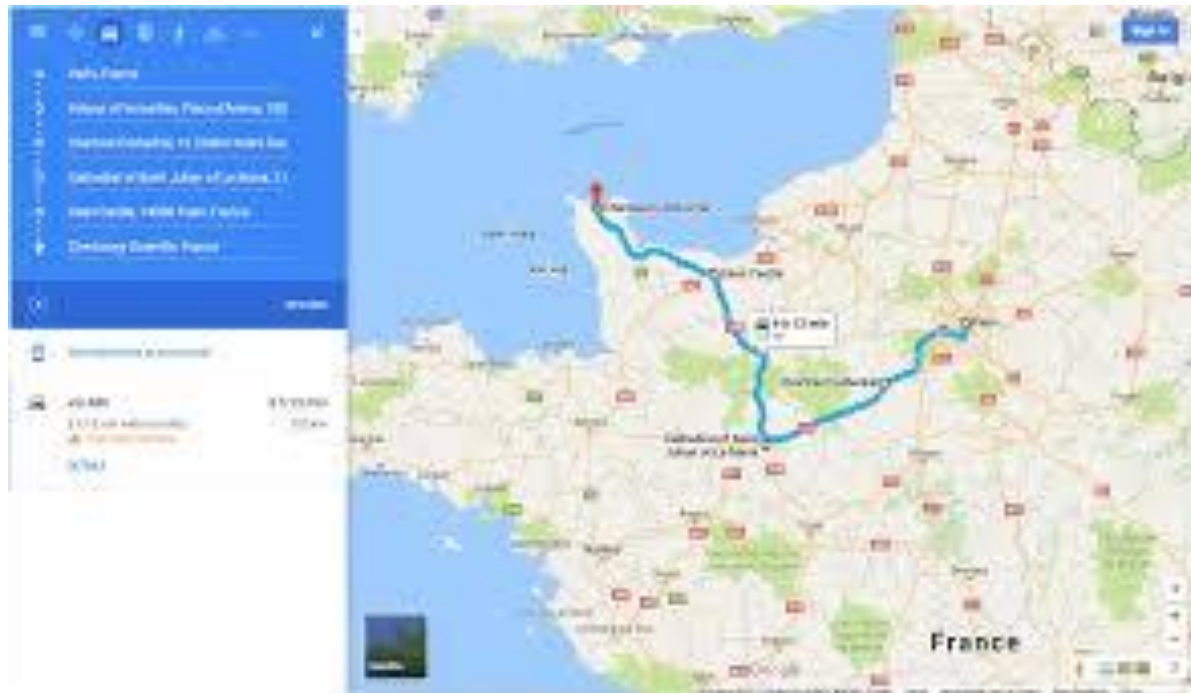

arch space

Google Map is an example

You give start and the end points and then it explores possibilities ..

Symbolic Systems with Heuristics

- Driving Directions
- Logistics
- Video Games
- Commercial Reality – Real Estate Recommendation

Machine Learning

Algorithms that can learn from observational data, and can make predictions based on it

Case Study:

E-Commerce- Different Discounts

Make My Trip- Show different Rooms for different Peoples

Finding a pattern is a great deal

Bias:

- > Doctor don't do operation (based on MI)
- > Gambling

Data is an ever present and growing part of our life....

Humanity is produced a Tera byte of new data , per person , every year.

Huge part of it is transient data, that is not yet stored

Even Individual Datasets are Huge

Nasa earth orbiters

Streams in data at the rate of Gigabytes per second per device

**Traditional methods do not work
on these scales**

The ideas we have today, might not answer the questions we have for the data tomorrow ...

ID 16682232

© Texelart | Dreamstime.com

New question arise, as more data is being collected ...

- **That means , we need new ways to analyze data to gain insight..**

DATA ANALYSIS

The combination of applied mathematics and computer science

Data is organized , Analysed and put to use, Every Day...

Walmart, Amazon, Flipkart, Google Fit, etc.

CHARACTERISTICS

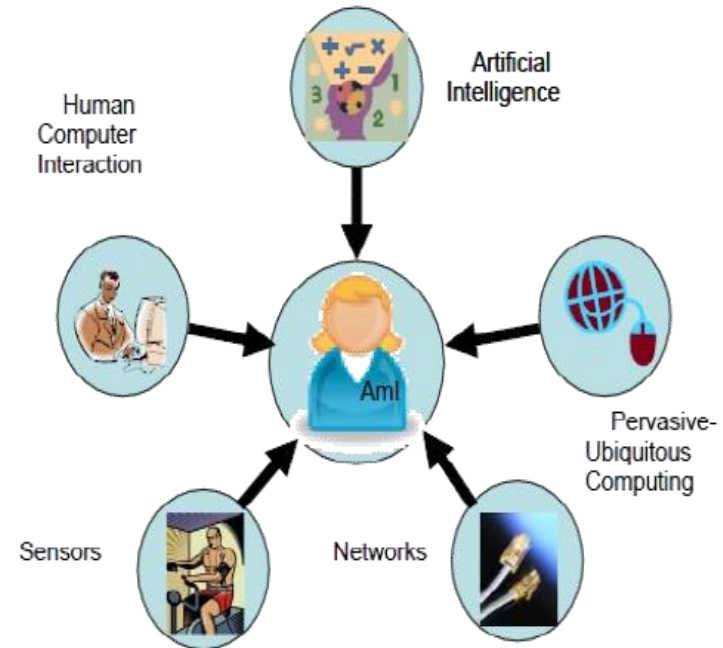

INTELLIGENCE

- Digital environment - Brings intelligence to the living environments.

- Makes environments sensitive.

Adapts according to the user's needs.

FLEXIBLE STRUCTURE

Concentrates on modeling and simulating
flexible

Elastic / Viscous / Viscoelastic

SEMANTIC SHARING

Sharing of unambiguous data.

Data + Interpretation

COMPLEX ACCESS TECHNOLOGY

Semi-open or closed loops access of technology.

Huge number of different links and interactions between

IOT ELEMENTS

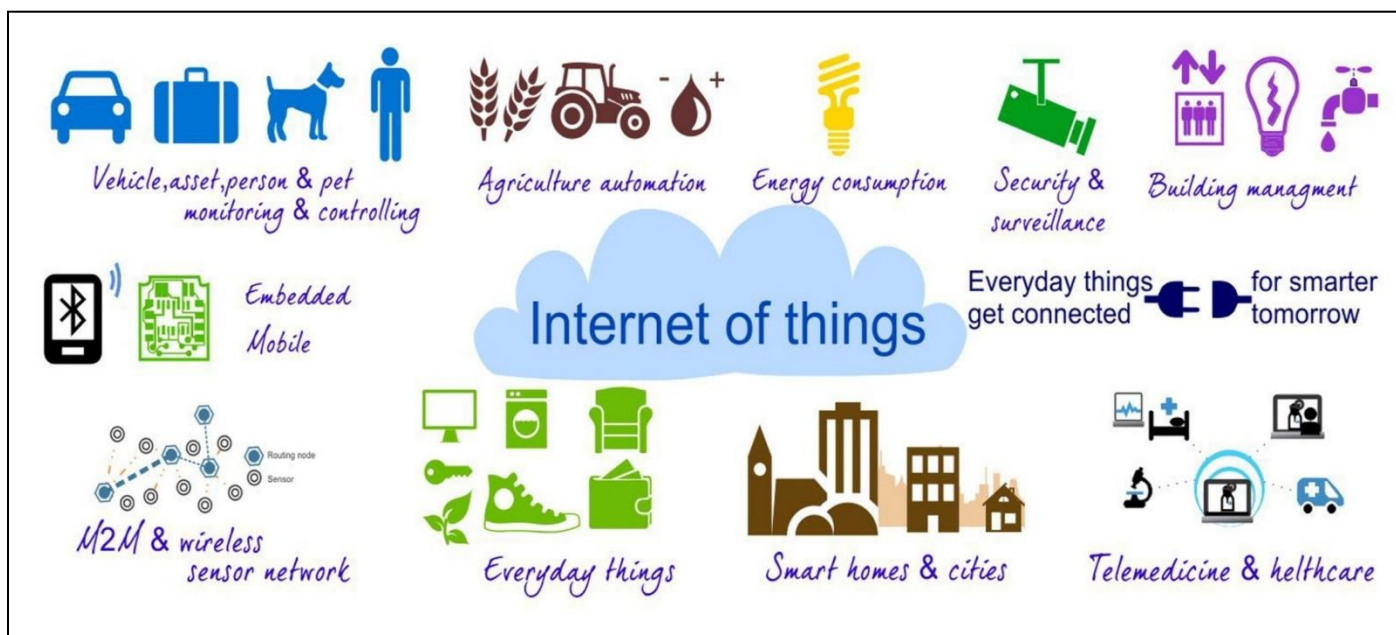

- Object ID and address
- Gathering data
- Connect heterogeneous object
- Processing units and software applications
- Identity-related, Information Aggregation, Collaborative-Aware and Ubiquitous Services
- Extract knowledge smartly by different machines

Ala A1-Fugaha et. al.

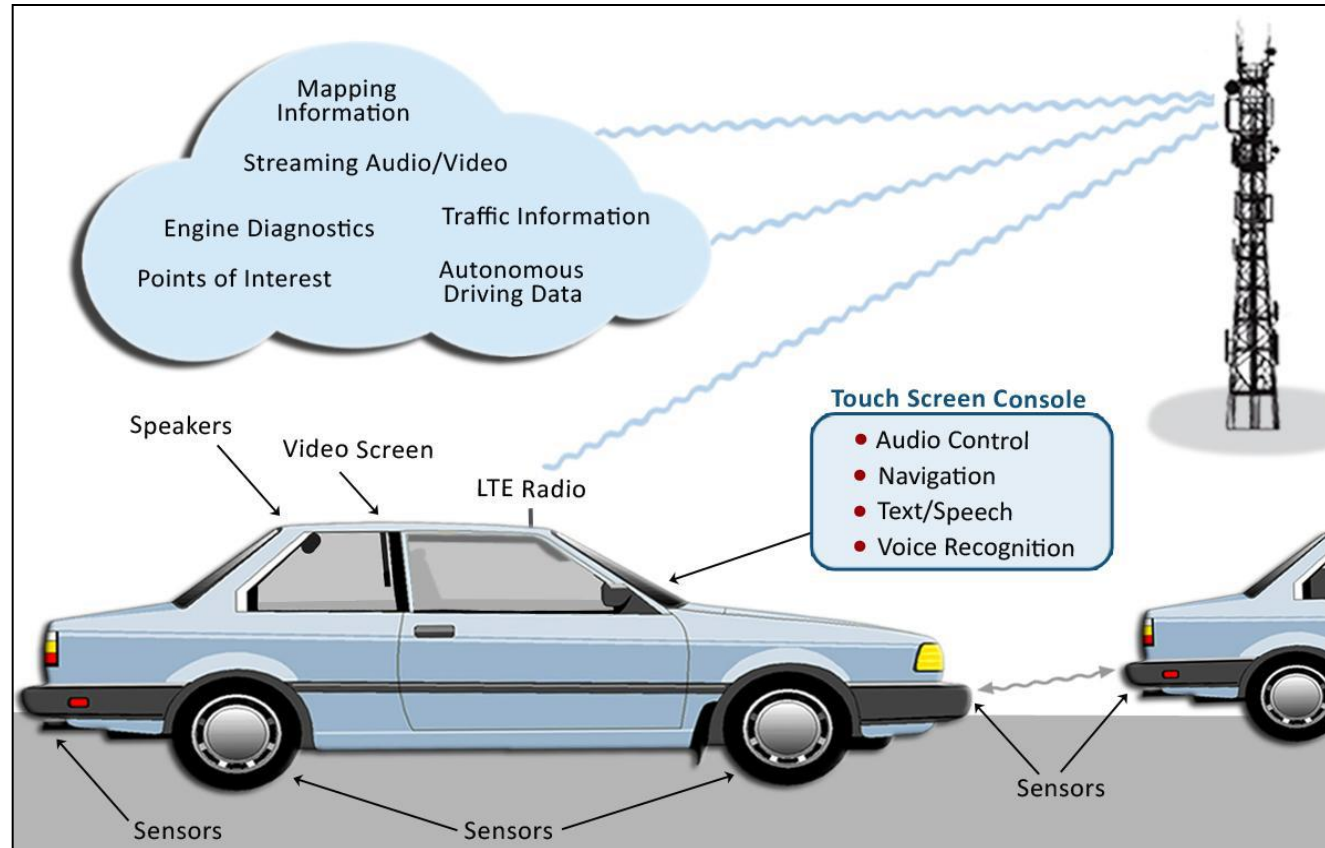

APPLICATIONS

Smart Home

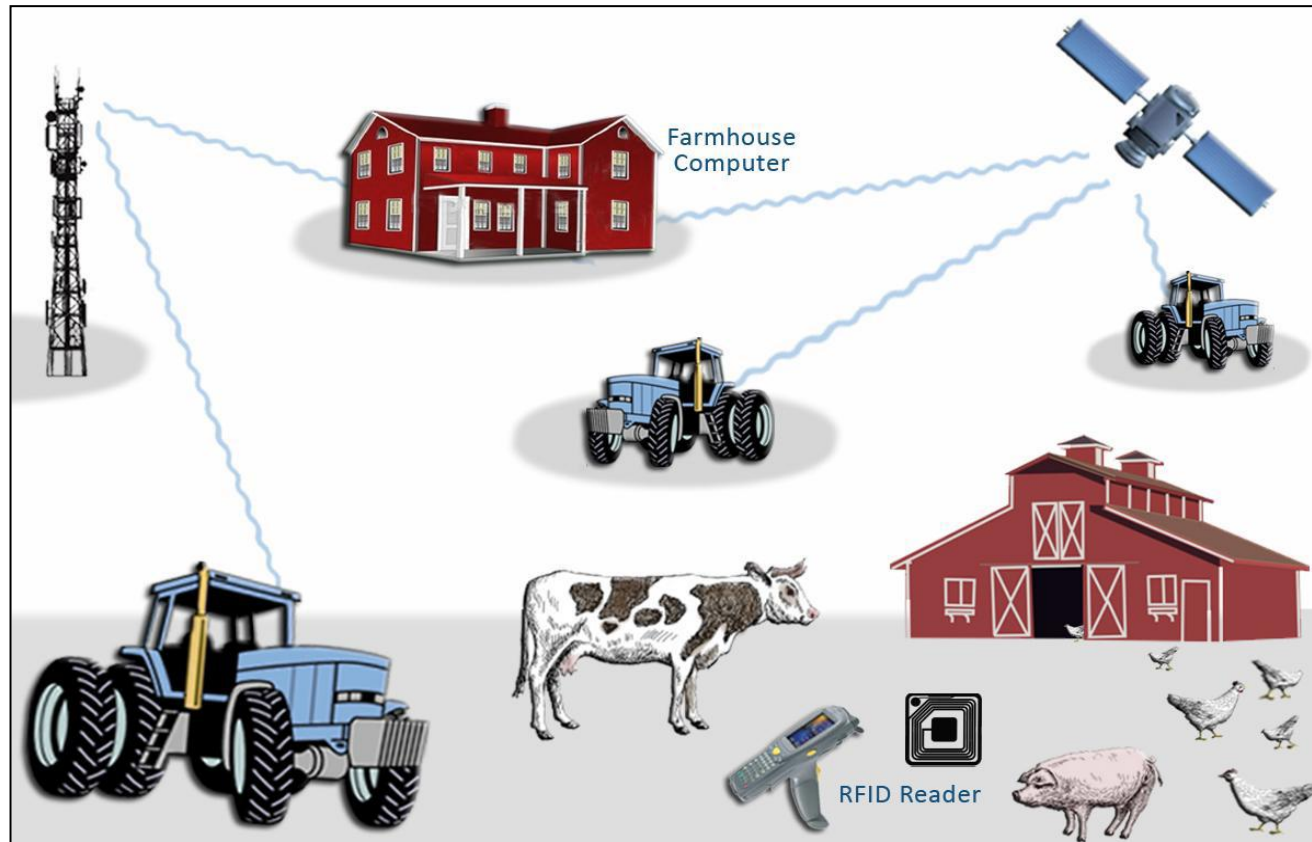

Smart Cars

E-Healthcare

Smart Farms

SCENARIO: SHOPPING

Illustration by Lisa Knouse Braiman for Forbes

(2) When shopping in the market, the goods will introduce themselves.

(1) When entering the doors, scanners will identify the tags on her clothing.

(4) When paying for the goods, the microchip of the credit card will communicate with checkout reader.

(3) When moving the goods, the reader will tell the staff to put a new one.

SMART JAR

INTERNET USAGE AND POPULATION STATISTICS

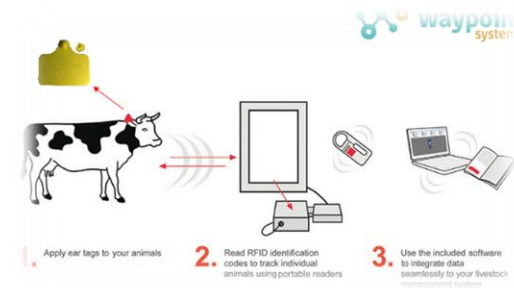

Source: Cisco IBSG, April 2011

COMPONENTS OF IOT

A **thing**, in the Internet of Things

- can be a person with a **BP monitor implant**
- a farm animal with a **biochip transponder**
- an automobile that has built-in sensors to alert the driver when **tire pressure is low**
- any other **natural** or **man-made** object

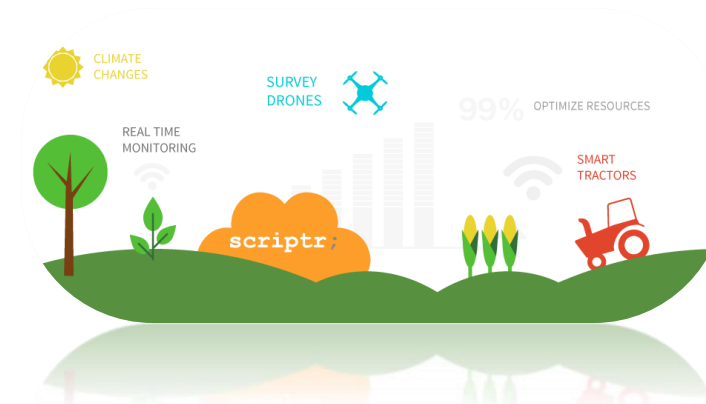

that can be assigned an **IP address** and provided with the ability to transfer data over a network

APPLICATIONS OF IOT

IoT is used and will be used in almost every industry

- Academic
- Transport
- Logistics
- Healthcare & Tracking
- Agriculture
- Fitness
- Smart Cities
- Ambient Living
- Entertainment

Day Hospital Use Case Actors and Resources

Sensors are being used to track a variety of factors on farms:

- water
- air quality
- weather
- disease
- nitrogen

COMMUNICATION TECHNOLOGIES

Signals collected by sensors can be transferred **over networks**

Different components of a typical network includes

- Routers
- Bridges in different topologies including LAN, MAN, PAN, BAN and WAN.

Connecting the different parts of networks to the sensors can be done by different technologies including

- Wi-Fi, Bluetooth
- Low Power Wi-Fi
- Ethernet
- Long Term Evolution (LTE) (Cellular IoT)
- Li-Fi

TYPES OF SENSORS: Active Sensors & Passive Sensors

The selection of sensors greatly impacted by many factors, including:

- Purpose (Temperature, Motion, Bio...etc.)
- Accuracy
- Reliability
- Range
- Resolution
- Level of Intelligence (dealing with noise and interference)

TYPES OF SENSORS

Accelerometer

Gyro

Pendulum Resistive Tilt Sensors

Piezo Bend Sensor

Metal Detector

Gas Sensor

Geiger-Muller Radiation Sensor

Digital Infrared Ranging

CDS Cell Resistive Light Sensor

Resistive Bend Sensors

UV Detector

Pyroelectric Detector

Pressure Switch

Miniature Polaroid Sensor

IR Pin Diode

IR Pin Diode

IR Sensor w/lens

Limit Switch

Mechanical Tilt Sensors

Touch Switch

IR Reflection Sensor

IR Amplifier Sensor

Thyristor

Magnetic Sensor

Hall Effect Magnetic Field Sensors

Polaroid Sensor Board

Lite-On IR Remote Receiver

Radio Shack Remote Receiver

IR Modulator Receiver

IRDA Transceiver

Solar Cell
