

# Wireless network protocols

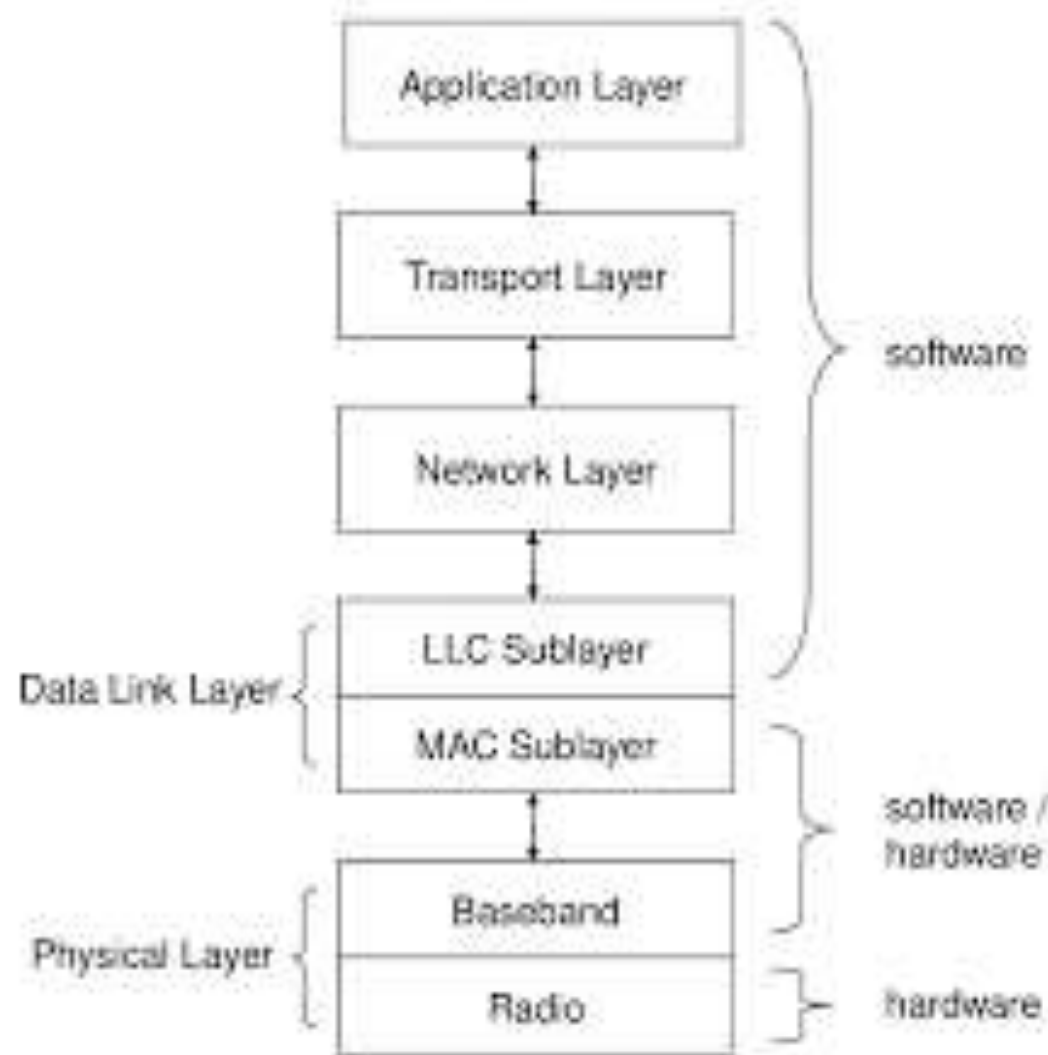

- ❖ Wireless network protocols are the rules and standards that govern how wireless devices exchange data.
- ❖ The most widely used wireless network protocols are based on the IEEE 802.11 family.
- ❖ which defines the physical and data link layers of the network.

# ARCHITECTURE OF WIRELESS NETWORK

- ❖ Wireless network architecture refers to the way wireless devices communicate.
- ❖ There are two main types of wireless network architecture
  1. infrastructure
  2. ad hoc.

# PHYSICAL LAYER

- ❖ The physical layer is the first and lowest layer of the Open Systems Interconnection (OSI) communications model.
- ❖ The physical layer's function is to transport data using electrical, mechanical or procedural interfaces.
- ❖ OSI is a reference model used to show how applications communicate over a network.
