

INFRASTRUCTURE OF WIRELESS NETWORK

- ❖ In infrastructure-based wireless networks, the communication takes place between the wireless nodes.
- ❖ There can be more than one access point on the same network handling different wireless nodes.
- ❖ The examples for endpoints in the network such as your computer, your phone, etc and the access points the router.

AD-HOC NETWORK SYSTEM ARCHITECTURE

- ❖ An ad hoc network is a temporary type of Local Area Network (LAN).
- ❖ If you set up an ad hoc network permanently, it becomes a LAN.
- ❖ Multiple devices can use an ad hoc network at the same time, but this might cause a lull in performance.
