

Functional groups:

①. Identify parent chain:

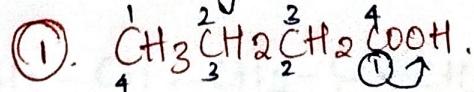

⇒ Longest carbon chain

⇒ Carbon chain with functional group.

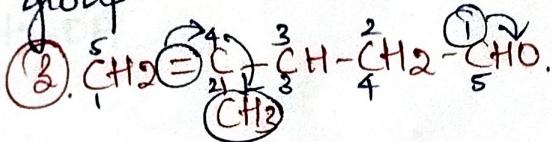

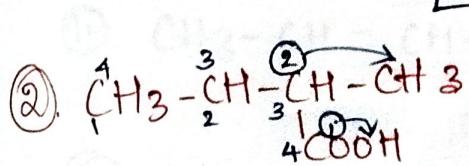

②. Numbering:

⇒ Functional group should receive lowest no.

⇒ Numbering order: Lowest to highest.

[functional group $\angle = \angle \equiv \angle$ subs.]

③. Naming:

Halo / + Substituent's + parent chain
 NO_2 alkyl name [Alk + (=) enlyn + f.g's
 (if present) (if present) {if present} suffix]

①. Butan-1-oic acid / Butanoic acid

②. 2-methyl butanoic acid.

③. 4-methyl pent-4-en-1-ol.

④. Halogens(Cl, Br, I, F) & NO_2 groups are considered as substitutions.

①. CH_3Br

Bromomethane

②. $\text{CH}_3\text{CH}_2\text{NO}_2$

Nitro ethane.
