

SNS COLLEGE OF PHARMACY AND HEALTHSCIENCES

PUZZLES - Unit IV

PHARMACEUTICAL ORGANIC CHEMISTRY-I (BP202T,)

Across

5. Easily ignited by a spark or flame, a safety concern for many liquids.
6. Agent known to increase cancer risk, found in some industrial chemicals.
7. Substance that slows decay, often added to biological samples.
8. To kill harmful microbes on surfaces, a common use for certain chemicals.
9. Chemical that stabilizes tissues for microscopic examination.
10. Poisonous, can cause harm if ingested or

Down

1. Large molecule built from many repeating subunits, produced in some chemical reactions.
2. Bond that connects polymer chains, enhancing material strength.
3. Organic compound with a carbonyl group between two carbons, includes a common lab solvent.
4. Process of creating complex molecules from simpler ones in chemistry.

Across

inhaled.
