

The Theory of Inference:

Argument:

An argument is a sequence of statements. All statements except the final one are called premises (or assumption or hypothesis). The final statement is called conclusion.

i.e., Let P_1, P_2, \dots, P_n be a sequence of statements that yield conclusion Q . It is denoted by $(P_1 \wedge P_2 \wedge \dots \wedge P_n) \rightarrow Q$ is a tautology.

Valid Argument:

An argument is called valid if the conclusion is true when all premises are true.

Invalid Argument:

An argument is called invalid if it is not valid argument.

Rules of Inference:

Rule P: A premise may be introduced at any point in the derivation.

Rule T: A formula S may be introduced at any point in a derivation if S is tautologically implied by any one or more of the preceding formula's.

Rule CP: If we can derive Q from R and a set of premises, then we can derive $R \rightarrow Q$ from the set of premises alone.

Types of Proof:

- i). Direct Proof
- ii). Indirect Proof (or) Proof by contradiction
- iii). Conditional proof
- iv). Inconsistent proof

Direct Proof:

When a conclusion is derived from a set of premises by using accepted rules of reasoning then such a process of derivation is called direct proof.

Implication Rules:

1. Modus Ponens:

$$P, P \rightarrow Q \Rightarrow Q$$

2. Modus Tollens:

$$P \rightarrow Q, \neg Q \Rightarrow \neg P$$

3. Disjunctive Syllogism:

$$\neg P, P \vee Q \Rightarrow Q$$

4. Hypothetical Syllogism:

$$P \rightarrow Q, Q \rightarrow R \Rightarrow P \rightarrow R$$

(a) Chain Rule

5. Simplification Rule:

$$P, Q \Rightarrow P \wedge Q$$

$$P \wedge Q \Rightarrow P, Q$$

6. Addition Rule:

$$P, Q \Rightarrow P \vee Q$$

7. Equivalence Rule:

$$P \wedge \neg Q \Rightarrow \neg(P \rightarrow Q)$$
