#### AN AUTONOMOUS INSTITUTION

Approved by AICTE New Delhi & Affiliated to Anna University Chennai Accredited by NBA & Accredited by NAAC with "A+" Grade, Recognized by UGC COIMBATORE

### DEPARTMENT OF CIVIL ENGINEERING

#### 19CEB204 – CONSTRUCTION MATERIALS

II YEAR / III SEMESTER

**Unit 2 : Lime – Cement – Aggregates** 

**Topic 4 : Types of Cement** 

# **Types of Cement**

- 1. Ordinary Portland Cement (OPC)
- 2. Portland Pozzolana Cement (PPC)
- 3. Rapid Hardening Cement
- 4. Extra Rapid Hardening Cement
- 5. Low Heat Cement
- 6. Sulphates Resisting Cement
- 7. Quick Setting Cement
- 8. Blast Furnace Slag Cement
- 9. High Alumina Cement
- 10. White Cement

# **Ordinary Portland Cement (OPC)**

- ➤ In usual construction work, Ordinary Portland Cement is widely used.
- ➤ Portland cement clinker is a hydraulic material which shall consist of at least two-thirds by mass of calcium silicates, (3CaO·SiO2, and 2CaO·SiO2), the remainder consisting of Aluminium- and iron-containing clinker phases and other compounds.
- The ratio of CaO to SiO2 shall not be less than 2.0.
- ➤ The magnesium oxide content (MgO) shall not exceed 5.0% by mass.

### **Ordinary Portland Cement (OPC)**

#### The composition of Ordinary Portland Cement:

- Argillaceous or silicates of alumina (clay and shale)
- Calcareous or calcium carbonate (limestone, chalk, and marl)

#### **Uses of Ordinary Portland Cement:**

- ➤ It is used for general construction purposes.
- It is also used in most of the masonry works.

### Portland Pozzolana Cement (PPC)

- Pozzolans are natural or synthetic materials that contain silica in reactive forms.
- ➤ It reacts with calcium hydroxide generated by hydrating cement to form additional cementations materials when it is finely divided.
- ➤ The composition of Portland Pozzolana Cement:
  - OPC clinker
  - Gypsum
  - Pozzolanic Materials (Fly ash, volcanic ash, and Calcined clay or silica fumes.)

### Portland Pozzolana Cement (PPC)

#### **Uses of Portland Pozzolana Cement:**

- ➤ PPC is usually used in hydraulic structures, marine structures, construction near the seashore, dam construction, etc.
- ➤ It is also used in pre-stressed and post-tensioned concrete members.
- As it gives a better surface finish, it is used in decorative and art structures.
- ➤ It is also used in the manufacture of precast sewage pipes.

# **Rapid Hardening Cement**

- ➤ When finely grounded Tri-calcium silicate (C3S) is present in OPC with higher content, it gains strength more quickly than OPC.
- ➤ This type of OPC is called Rapid Hardening Cement.
- ➤ It's initial Setting Time 30 minutes and Final Setting Time 600 minutes.

### **Uses of Rapid Hardening Cement**

- Rapid hardening cement is mostly used where rapid construction is needed like the construction of pavement.
- It also gives high strength.

# **Quick Setting Cement**

- Quick setting cement is the cement which sets in a very short time.
- The initial setting time is 5 minutes and the final setting time is 30 minutes.
- ➤ The composition of Quick Setting Cement:
  - Clinker
  - Aluminum sulfate (1% to 3% by weight of clinker)
  - The aluminum sulfate increases the hydration rate of silicate.

# **Quick Setting Cement**

#### **Uses of Quick Setting Cement:**

- ➤ It is used in underwater construction.
- It is also used in rainy & cold weather conditions.
- ➤ It is used a higher temperature where water evaporates easily.
- Used for anchoring or rock bolt mining and tunneling.

### **Low Heat Cement**

- ➤ It is a spatial type of cement which produces low heat of hydration during the setting.
- Some chemical composition of Ordinary Portland Cement is modified to reduce the heat of hydration.
- ➤ The chemical composition of low heat cement:
  - A low percentage (5%) of tricalcium aluminate (C3A)
  - A higher percentage (46%) of dicalcium silicate (C2S).

### **Low Heat Cement**

#### **Uses of Low Heat Cement:**

- It is used for the construction of dam's large footing, large raft slabs, and wind turbine plinths.
- ➤ It is also used for the construction of chemical plants.

# **Sulphate Resisting Cement**

- Sulfate resisting cement is used to resist sulfate attacks in concrete.
- ➤ Due to the lower percentage of Tricalcium aluminate, the production of calcium sulpho-aluminates gets reduced.

#### **Uses of Sulphates resisting Cement:**

- Construction in contact with soils or groundwater having more than 0.2% or 0.3 % g/l sulfate salts respectively.
- Concrete surfaces subjected to alternate wetting and drying such as bridge piers, concrete surface in the tidal zone, apron, Building near the seacoast.
- Effluent treatment plans, Chimney, Chemical industries, water storage, sumps, drainage works, Cooling towers, Coastal protective works such as sea walls, breakwaters, etc.

### **Blast Furnace Cement**

- Portland cement clinker and granulated blast furnace slag (obtained by quenching molten iron slag) are intergraded to make blast furnace cement.
- A maximum of 65 percent of the mixture could be comprised of blast furnace slag.

#### **Uses of Blast Furnace Cement:**

- It is highly sulfate resistant
- Frequently used in seawater construction.

# **High Alumina Cement**

- ➤ High Alumina cement is obtained by mixing calcining bauxite (it's an aluminum ore) and ordinary lime with clinker during the manufacture of OPC.
- In which the total amount of alumina content should not be lesser than 32% and it should maintain the ratio by weight of alumina to the lime between 0.85 to 1.30.

#### **Uses of High Alumina Cement:**

- It is used where concrete structures are subjected to high temperatures like workshops, refractory, foundries, etc.
- It also used where the concrete is subjected to frost and acidic action.

### **White Cement**

- ➤ White cement is quite similar to Ordinary Portland Cement except for color.
- ➤ Amounts of iron oxide and manganese oxide are low in White Cement.
- ➤ It is expensive then OPC so not economical for ordinary work.

#### **Uses of White Cement:**

- It is usually used in decorative work.
- It can also use for traffic barriers, tile grouts, swimming pools, roof tiles patching materials, and terrazzo surfaces.

### **Colored Cement**

- > To make 5 to 10 percent of suitable pigments are ground with OPC.
- > Types of pigments are selected according to the desired color.

#### **Uses of Colored Cement:**

Colored cement is used for different decorative work.

# **Air Entraining Cement**

- ➤ It is seen that entrainment of air or formation of gas bubbles while applying cement increases resistance to frost action, fire, scaling, and other similar defects.
- Air-entraining cement is a special type of cement which entrains tinny air bubbles in concrete.
- ➤ It is produced by grinding minute air entertaining materials with clinker by adding some resinous materials e.g. vinsol resin to ordinary Portland cement.
- ➤ When the water in concrete gets frizzed due to low temperature, it expands.
- ➤ When air-entraining cement, the air voids in concrete provides space for water to expand without cracking concrete.
- > But this type of cement does not provide high strength in concrete.

### **Air Entraining Cement**

### **Uses of Air-Entraining Cement:**

- Especially it is used in areas where the temperature is very low.
- It also resists the Sulphate attack.
- o It is used where the de-icing chemical is used.

### **Expansive Cement**

- ➤ In the hydration process, the expansive cement expands its volume.
- ➤ It can be possible to overcome shrinkage loss by using expansive cement.

### There are three types of expansive cement:

- 1. K Type expansive cement
- 2. M Type expansive cement
- 3. S Type expansive cement

### **Expansive Cement**

#### K Type expansive cement

Raw materials of these types of cement

- Portland cement
- Anhydrous tetracalcium trialuminate sulfate (C4A3S)
- Calcium sulfate (CaSO4)
- Lime (CaO).

#### **M** Type Expansive Cement

Raw materials of these types of cement

- Portland cement clinkers
- Calcium sulfate.

### **Expansive Cement**

#### **S Type Expansive Cement**

Raw materials of these types of cement

- Portland cement clinkers
- Calcium sulfate (High amount)
- Tricalcium aluminate (C3A) (High amount)

#### **Uses of Expansive cement:**

- o It is used in the construction of the pre-stressed concrete component.
- It is also used for sealing joints and grouting anchor bolt.
- In the construction of different hydraulic structures, this type of cement is used.

### **Hydrophobic Cement**

- To resist the hydration process in the transportation or storage stage, clinkers are ground with water repellent film substance such as **Oleic**Acid or Stearic Acid.
- These chemicals form a layer on the cement particle and do not allow water to mix and start the hydration process.
- ➤ When cement and aggregate are thoroughly mixed in the mixer, protective layers break and start normal hydration with some airentrainment which increases workability.

### **Hydrophobic Cement**

#### **Uses of Hydrophobic Cement**

- Usually, it is used in the construction of water structures such as dams, spillways, or other submerged structures.
- It is also used in the construction of underground structures like tunnel etc.

# Thank You!!
