

# • Sorting

- Key
- Colleges, hospitals, office
- Ease of search dictionaries, telephone books, class list
- Several algorithm not good for all the situations
- Searching is made easier
- Properties of sorting algorithm
  - Stable
  - In place

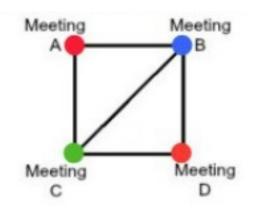

- Searching
  - Search key
  - Several algorithm
- String processing
  - String string matching

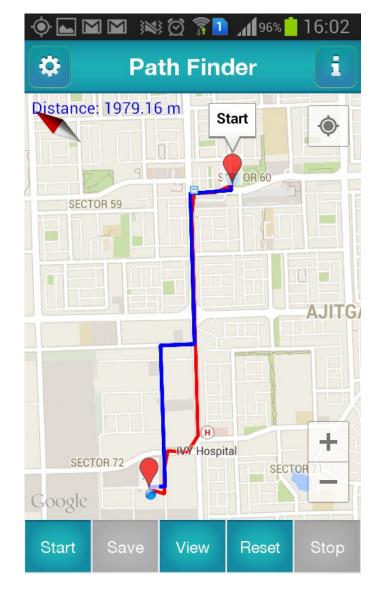

– Natural la – Pseudo co – Flowchar	ode (Natural language + programming con	structs)	
26-Jan-21	Design and Analysis of Algorithm - M.Shobana	13 Replace Find what:	? × Find Next Close
		Match case	e Replace

#### • Graph problems

- Vertices, edges
- Graph traversal, shortest path
- Flight network, Google map shortest path
- Ex: travelling salesman problem,
- Graph coloring event scheduling

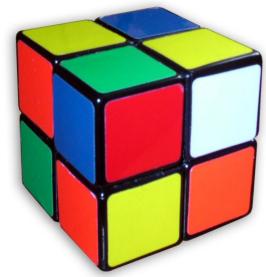

\*

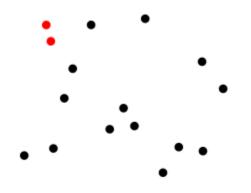

#### • Combinatorial problems

- Finding optimal object from a finite set of objects (permutation, combination, subset from a finite set)
- Example:
  - How many ways are there to make a 2-letter word
  - How many ways are there to select 5 integers from {1, 2, ...., 20}

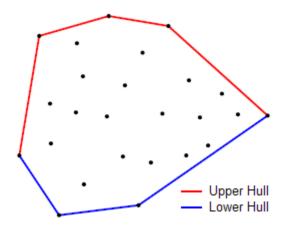

- Geometric Problems
  - Points, lines, polygons
  - Computer graphics (circle,smiley)
  - Example
    - Closest pair problem

Convex hull problem

<u>Real-time application</u> Nuclear/chemical leak Evacuation Tracking Disease epidemic

- Numerical Problems
  - Integrals, functions
  - Approximate
  - Real numbers
