DEPARTMENT OF CHEMISTRY

COURSE NAME : 19HST101- ENVIRONMENTAL SCIENCE

I YEAR / I SEMESTER

UNIT : 3. ENVIRONMENTAL POLLUTION

TOPIC : 3. WATER POLLUTION

BRAINSTORMING WITH RECAP

INTRO

- The contamination of a stream, river, lake, ocean or any other stretch of water, depleting water quality and making it toxic for the environment and humans.

- Any physical or chemical change in water that adversely affects the health of humans and other organisms

SOURCES

1. Point sources

Specific sites which directly discharge the effluents to water bodies

2. Non-Point sources

Non-Specific sites which are scattered

SOURCES

3.Industrial waste- Organic & Inorganic waste

4.Domestic / community waste

SOURCES

5. Agricultural waste

6. Oil spillage

7. mining

8. Ground water pollution

9. Waste heat

10. Air pollution

EFFECTS

1. Pathogens

Spreading water born diseases like--

2. O₂ demanding waste

- **DO** – The amount of O₂ dissolved in a given quantity of water at a particular temperature & atm
- **DO varies – 8-15 mg/l**
- **BOD**
- The amount of O₂ required for microorganisms to decompose the aerobic decomposers for biochemical degradation of organic matters in water

EFFECTS

- **COD**
- The amount of O₂ required for chemical oxidation of organic matters in water using oxidizing agents like K₂Cr₂O₇/KMnO₄

3. N/P compounds

Causes eutrophication

4. Toxic compounds

Bio accumulation

5. Effect of sediments

6. Effect of metals like Pb, Ar, etc

CONTROL MEASURES

1. Source control

- Waste water treatment- before discharge
- Plant more trees- avoid surface runoff
- Integrated usage of pest management
- N fixing plants
- Limits the usage of pesticides & fertilizers
- Proper drainage system
- Maintenance of water bodies
- monitoring
