## **An Autonomous Institution**

### **Coimbatore-35**

Accredited by NBA – AICTE and Accredited by NAAC – UGC with 'A+' Grade  
Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

## **DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING**

### **19ECB212 – DIGITAL SIGNAL PROCESSING**

II YEAR/ IV SEMESTER

### **UNIT 1 – DISCRETE FOURIER TRANSFORM**

TOPIC – FAST FOURIER TRANSFORM - DIT

---

## PROBLEM

1

- Conversion from time to frequency domain is slow

2

- Cannot able to apply for vast applications

3

- Filtering of the signals is also a slow process

## METHOD

# FAST FOURIER TRANSFORM

- The Fast Fourier Transform (FFT) is a family of algorithms that calculates efficiently the Discrete Fourier Transform (DFT)
- The DFT is also a sequence,  $X[k]$
- This efficiency of the FFT is at a maximum when the length of the sequence is a power of 2, i.e.,  $N=2^p$ , with  $p$  is a positive integer
- The complexity of FFT algorithms is  $O(N\log_2 N)$ .

# FAST FOURIER TRANSFORM

## METHODS OF FFT

**DIT**

- **Decimation in Time**

**DIF**

- **Decimation in Frequency**

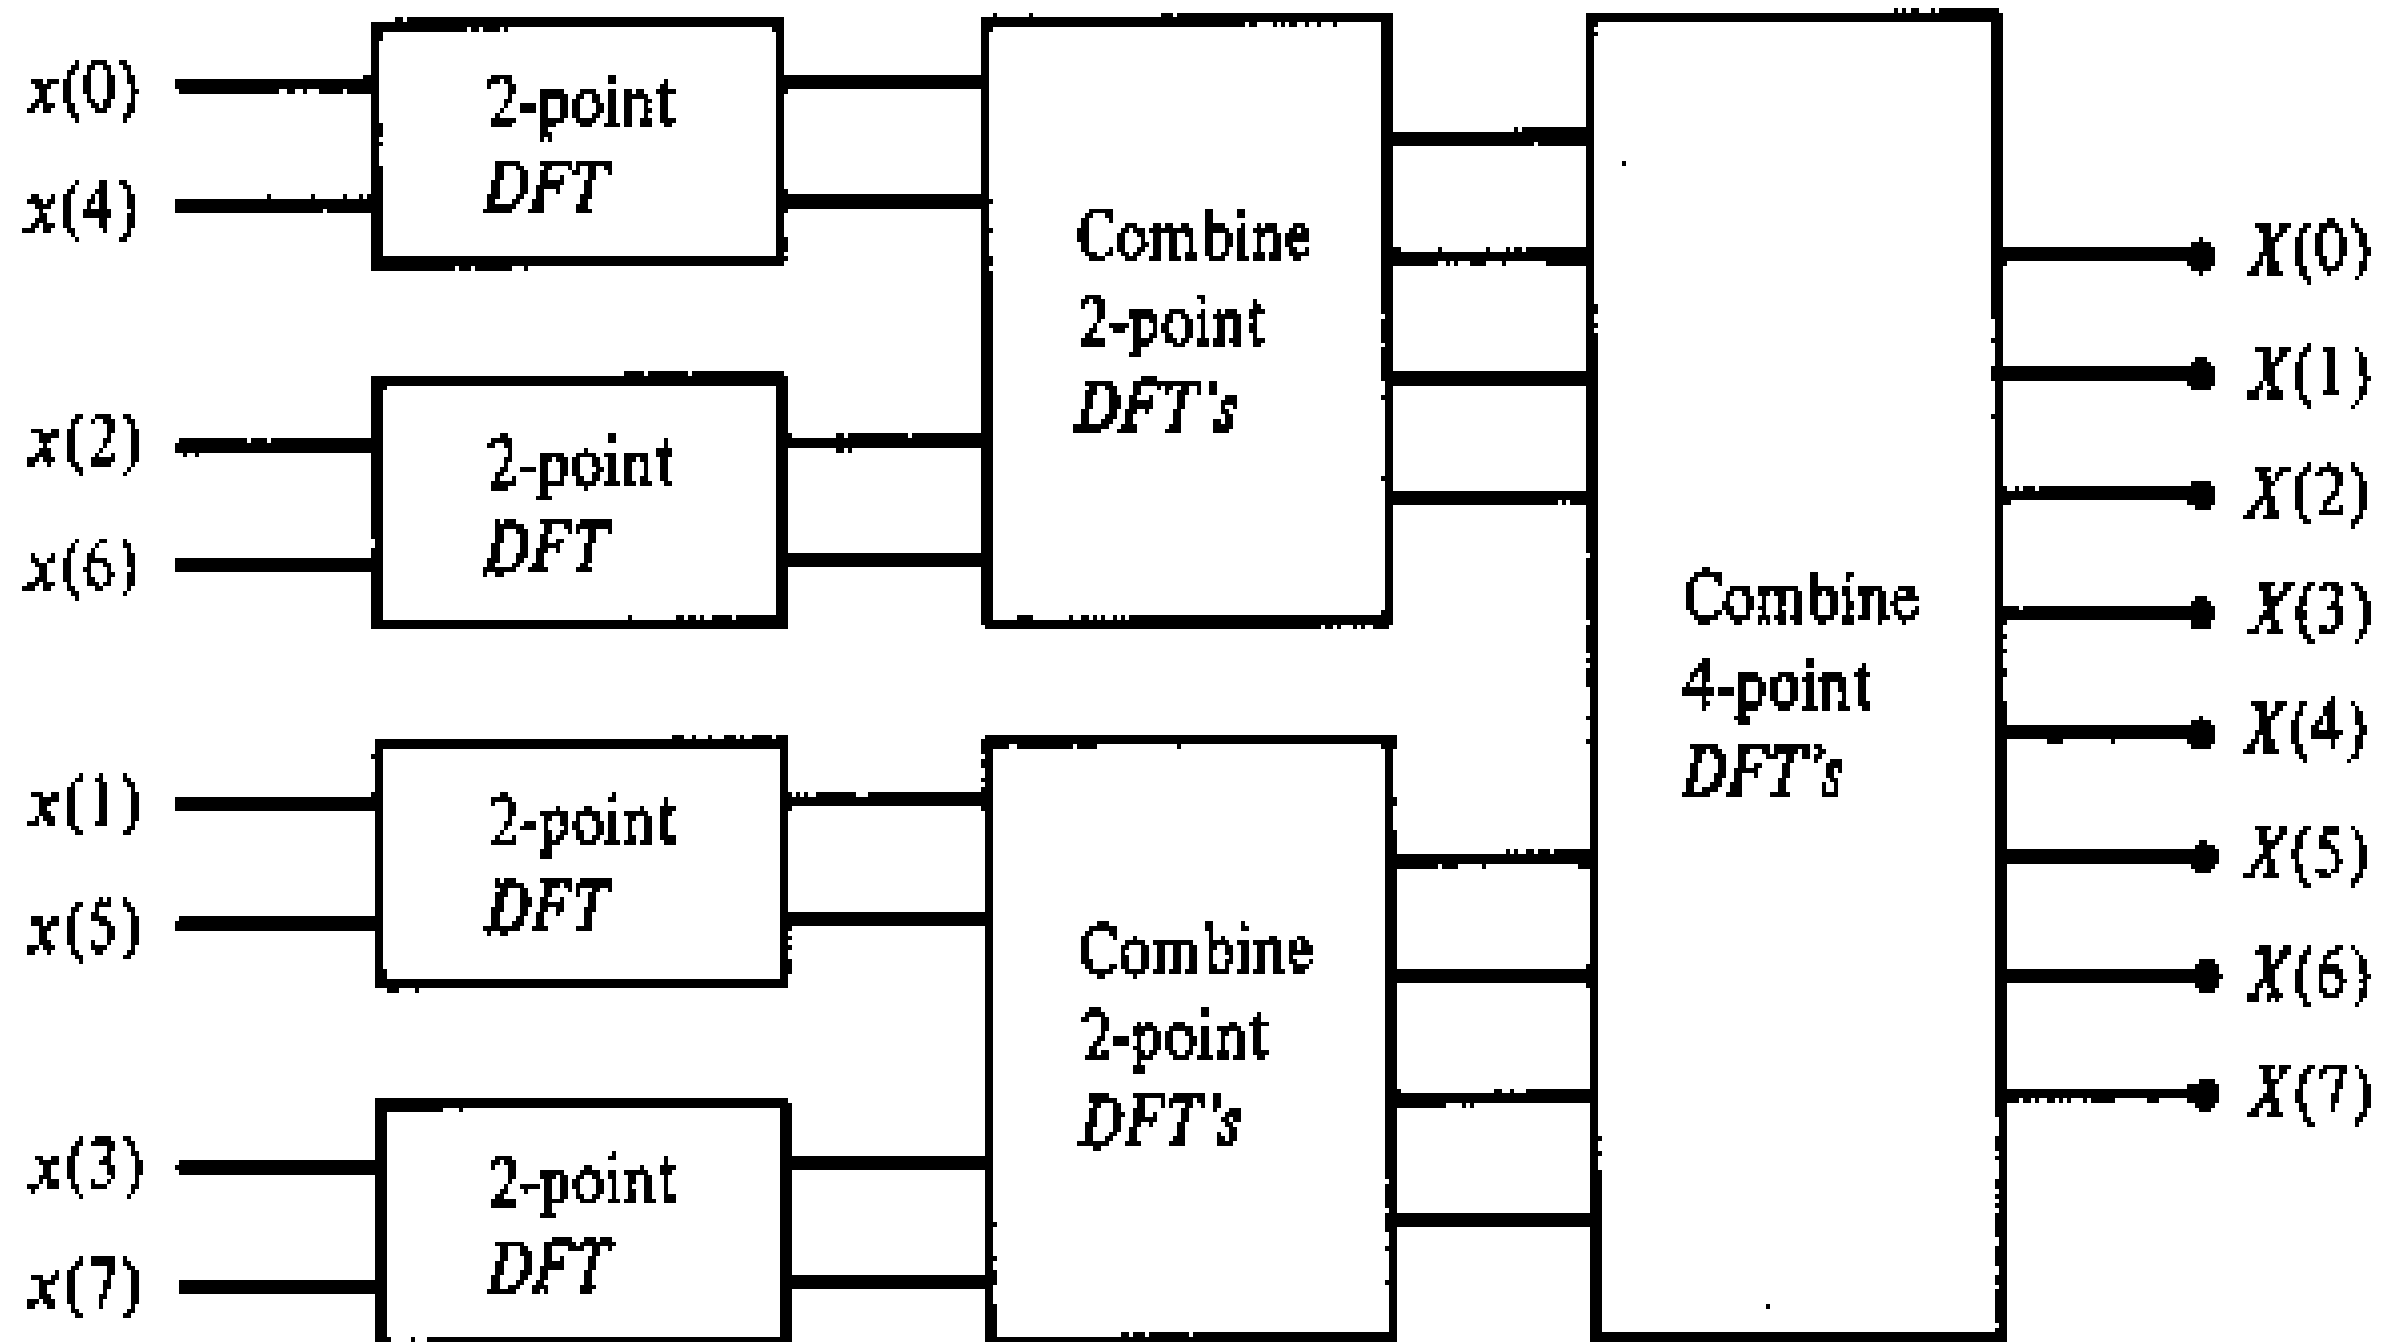

# RADIX 2 DIT FFT

# DECIMATION IN TIME FLOW GRAPH

## 4 POINT DECIMATION IN TIME FFT

## 8 POINT DECIMATION IN TIME FFT

# DECIMATION IN TIME FFT

# DECIMATION IN TIME FFT

# DECIMATION IN TIME FFT

## INPUT SEQUENCE ORDER

Original	Binary Form	Reversed Form	Final
0	000	000	0
1	001	100	4
2	010	010	2
3	011	110	6
4	100	001	1
5	101	101	5
6	110	011	3
7	111	111	7

## COMPLEX MULTIPLICATIONS

- *Each inner product requires  $N$  complex multiplications*
- *There are  $N$  inner products*
- *Hence we require  $N^2$  multiplications*
- *However, the first row and first column are all 1s, and should not be counted as multiplications*
- *There are  $2N - 1$  such instances*
- *Hence, the number of complex multiplications is  $N^2 - 2N + 1$ , i.e.,  $(N - 1)^2$*

## COMPLEX ADDITIONS

- *Each inner product requires  $N - 1$  complex additions*
- *There are  $N$  inner products*
- *Hence we require  $N(N - 1)$  complex additions*
- ***No. of complex multiplications:  $(N - 1)^2$***
- ***No. of complex additions:  $N(N - 1)$***

## DECIMATION IN TIME

Given  $x(n)=\{1,2,3,4\}$ , find  $X[k]$  using 4 Point DIT FFT algorithm

## DECIMATION IN TIME - STAGE 1

Given  $x(n)=\{0,1,2,3,4,5,6,7\}$ , find  $X[k]$  using DIT FFT algorithm

## DECIMATION IN TIME - STAGE 2

## DECIMATION IN TIME - STAGE 3

## DIFFERENCE B/W DIRECT COMPUTATION & RADIX-2 FFT

S.No.	Direct Computation	Radix 2 FFT
1	Direct computation requires large number of computations as compared with FFT algorithms.	Radix-2 FFT algorithms requires less number of computations.
2	Processing time is more and more for large number of N hence processor remains busy.	Processing time is less hence these algorithms compute DFT very quickly as compared with direct computation.
3	Direct computation does not requires splitting operation.	Splitting operation is done on time domain basis (DIT) or frequency domain basis (DIF)
4	As the value of N in DFT increases, the efficiency of direct computation decreases.	As the value of N in DFT increases, the efficiency of FFT algorithms increases.

## ASSESSMENT

1. What is meant by FFT and list the methods of FFT.
2. In Fast Fourier Transform, ----- domain can be converted into ----- domain.
3. In Decimation in Time, the flow graph is represented as -----, 4 – Point and -----FFT.
4. What is the difference between direct computation and Radix 2 FFT.
5. Determine DIT of  $x(n) = \{ 1,2,3,4\}$
6. In Fast Fourier Transform,

***No. of complex multiplications: ----- No. of complex additions: -----***

# THANK YOU
