UNIT-1 PROBABILITY AND RANDOM VARIABLES

Probability:

probability is a concept which we use to deal with uncertainty.

- * we use probability in daily life to make decisions when you don't know for sure what the outcome will be.

For example,

1. Most probably it will rain today
2. I doubt that he will win the race.
3. chances are high that the prices of petrol will go up.

Applications:

- * modelling of text and web data
- * speech recognition
- * Robotics
- * Network traffic and system Reliability modeling
- * Probabilistic analysis of algorithms and graphs
- * Machine learning and data mining
- * Cryptography

Terms related with Probability:

Experiment:

An experiment which, though repeated under essentially identical conditions does not give unique results but may result in any one of the several possible outcomes.

Outcome:

A result of an experiment is called an outcome.

Sample Space:

A Sample Space is the collection of all possible outcomes.

Trial:

Performing an experiment is known as trial.

Event:

The outcomes of the experiment are known as Event.

Types of Events:

* **Mutually Exclusive Events:**

If the occurrence of one event excludes the occurrence of another event, such events are mutually exclusive events.

* **Exhaustive Events:**

A set of events is called exhaustive if all the events together consume the entire sample space.

* **Independent event:**

If the occurrence of one event has no influence over the occurrence of the other event.

DEPARTMENT OF MATHEMATICS

UNIT-1 PROBABILITY AND RANDOM VARIABLES

Probability of an Event :

$$P(A) = \frac{\text{Favourable number of cases}}{\text{[Exhaustive number of cases. (or) Total number of cases]}}$$

1] Find the probability of getting

i). 4

ii). an odd number in a die.

Soln.:

$$S = \{1, 2, 3, 4, 5, 6\}$$

$$P(A) = \frac{1}{6} ; P(B) = \frac{3}{6} = \frac{1}{2}$$

2] If a coin is tossed, then what is the probability of getting head?

$$S = \{H, T\}$$

$$P(\text{Head}) = \frac{1}{2}$$

3] If you flip a balanced coin twice, what is the probability of getting at least one head?

$$S = \{HH, HT, TH, TT\}$$

$$P(\text{at least one head})$$

$$= \frac{3}{4}$$

$$2^n \\ 2^2 = 4$$

DEPARTMENT OF MATHEMATICS

UNIT-1 PROBABILITY AND RANDOM VARIABLES

Axioms of probability:

- 1]. For any event A , $P(A) \geq 0$
- 2]. Probability of the sample space S is $P(S) = 1$
- 3]. If A_1, A_2, \dots are disjoint events, then
$$P[A_1 \cup A_2 \cup \dots] = P[A_1] + P[A_2] + \dots \quad [A_i \cap A_j = \phi]$$

Results:

- i). $P[\phi] = 0$ impossible event
- ii). $P[\bar{A}] = 1 - P[A]$
- iii). $P(\bar{A} \cap \bar{B}) = P(\overline{A \cup B})$
- iv). $P(\bar{A} \cup \bar{B}) = P(\overline{A \cap B})$
- v). $P(A \cup B) = P(A) + P(B)$ A & B are mutually exclusive events
- vi). $P(A \cap B) = P(A) \cdot P(B)$ A & B are independent
- vii). $P(A \cup B) = P(A) + P(B) - P(A \cap B)$
- viii). $P(A^c \cup B^c) = P(A \cap B)^c$; $P(A^c \cap B^c) = P(A \cup B)^c$
- ix). $P(A+B) = P(A \cup B)$; $P(AB) = P(A \cap B)$

problems.

2]. If $P(A) = 0.4$, $P(B) = 0.7$ and $P(A \cap B) = 0.3$.

Find $P(\bar{A} \cap \bar{B})$ and $P(\bar{A} \cup \bar{B})$

Soln.:

$$P(\bar{A}) = 1 - P(A) = 1 - 0.4 = 0.6$$

$$P(\bar{B}) = 1 - P(B) = 1 - 0.7 = 0.3$$

$$\begin{aligned} P(\bar{A} \cap \bar{B}) &= P(\overline{A \cup B}) = 1 - P(A \cup B) \\ &= 1 - [P(A) + P(B) - P(A \cap B)] \end{aligned}$$

DEPARTMENT OF MATHEMATICS

UNIT-1 PROBABILITY AND RANDOM VARIABLES

$$= 1 - [0.4 + 0.7 - 0.3] = 1 - 0.8 = 0.2$$

$$P(\bar{A} \cap \bar{B}) = 0.2$$

$$P(\bar{A} \cup \bar{B}) = P(\overline{A \cap B}) = 1 - P(A \cap B) \\ = 1 - 0.3$$

$$P(\bar{A} \cup \bar{B}) = 0.7$$

2. If A and B are even with $P(A) = \frac{3}{8}$, $P(B) = \frac{1}{2}$ and $P(A \cap B) = \frac{1}{4}$. Find

$$P(A^c \cap B^c)$$

Soln:

$$P(A^c \cap B^c) = P(A \cup B)^c \\ = 1 - P(A \cup B) \\ = 1 - [P(A) + P(B) - P(A \cap B)] \\ = 1 - \left[\frac{3}{8} + \frac{1}{2} - \frac{1}{4} \right] \\ = 1 - \left(\frac{3+4-2}{8} \right) = 1 - \frac{5}{8} = \frac{8-5}{8} \\ = \frac{3}{8}$$

3. Event A & B are $P(A+B) = \frac{3}{4}$, $P(AB) = \frac{1}{4}$.

$$P(\bar{A}) = \frac{2}{3}. \text{ Find } P(B)$$

Soln.

$$\text{Gvn. } P(A \cup B) = \frac{3}{4}, P(A \cap B) = \frac{1}{4}$$

$$P(\bar{A}) = \frac{2}{3} \quad \left| \quad P(\bar{A}) = 1 - P(A) \Rightarrow P(A) = 1 - P(\bar{A}) \\ P(A) = 1 - \frac{2}{3} = \frac{1}{3}$$

UNIT-1 PROBABILITY AND RANDOM VARIABLES

$$P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

$$P(B) = P(A \cup B) - P(A) + P(A \cap B)$$

$$= \frac{3}{4} - \frac{1}{3} + \frac{1}{4} = \frac{9-4+3}{12}$$

$$P(B) = \frac{8}{12} = \frac{2}{3}$$

4]. A bag containing 6 red, 4 black and 7 blue, 10 white. Five balls are drawn at random. what is the probability that two of them are red and one is black, two is blue.

Soln. 6R 4BL 7B 10W = 27

$$\text{Prob} = \frac{{}^6C_2 \times {}^4C_1 \times {}^7C_2}{27C_5}$$

$$= \frac{6 \times 5 \times 4 \times 7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1}{2 \times 1 \times 2 \times 1 \times 27 \times 26 \times 25 \times 24 \times 23}$$

$$= \frac{14}{897} = 0.015$$

5]. A bag containing 5 white balls, 6 green balls. Three balls are drawn with replacement. what is the chance that

- i). All are same color
- ii). They are alternatively different color.
