(An Autonomous Institution)

COIMBATORE-35

Accredited by NBA-AICTE and Accredited by NAAC – UGC with A+ Grade

Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

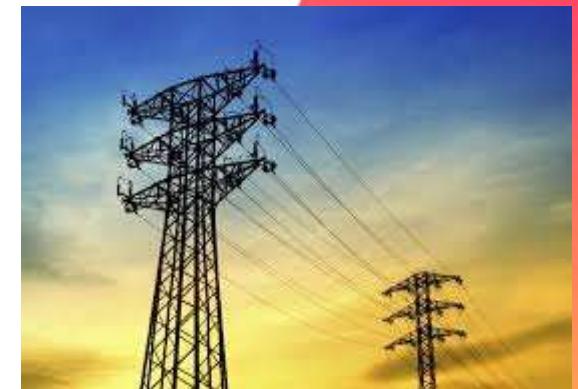

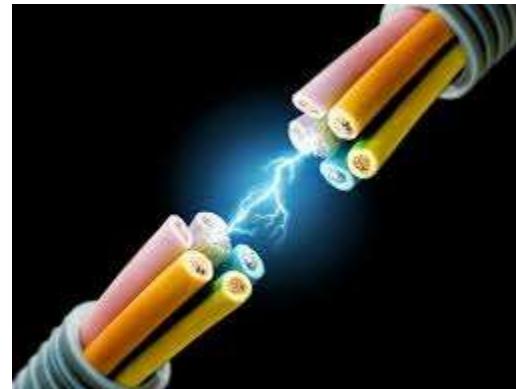

19EEB102 / ELECTRIC CIRCUIT ANALYSIS I YEAR / II SEMESTER UNIT-I: BASIC CIRCUIT ANALYSIS

KIRCHOFFS LAW

TOPIC OUTLINE

- Kirchoff's Law
 - KCL
 - KVL
- Problems

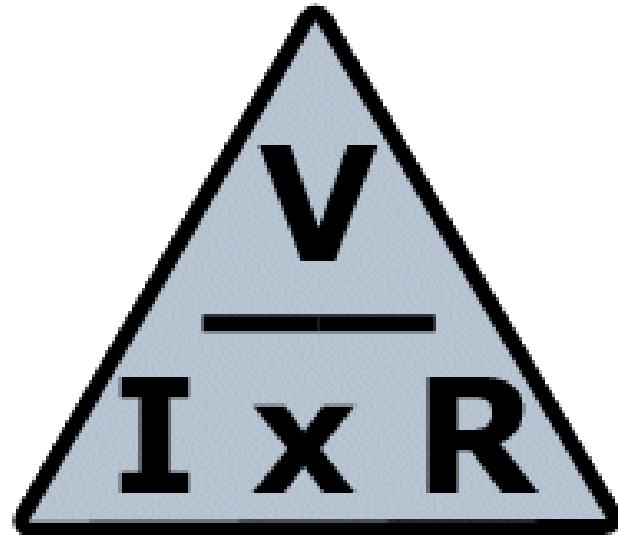

OHMS LAW - RECAP

- $V = I \times R$

- $I = \frac{V}{R}$

- $R = \frac{V}{I}$

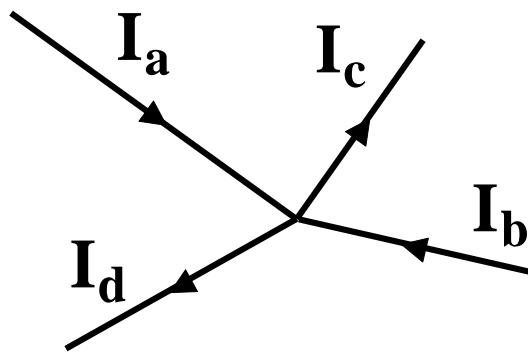

KCL

- Kirchoff's Current Law (KCL) :

The sum of the **current entering** a node (junction point) equal to the sum of the **currents leaving**.

$$I_a + I_b = I_c + I_d$$

I_a , I_b , I_c , and I_d can each be either a positive or negative number.

KVL

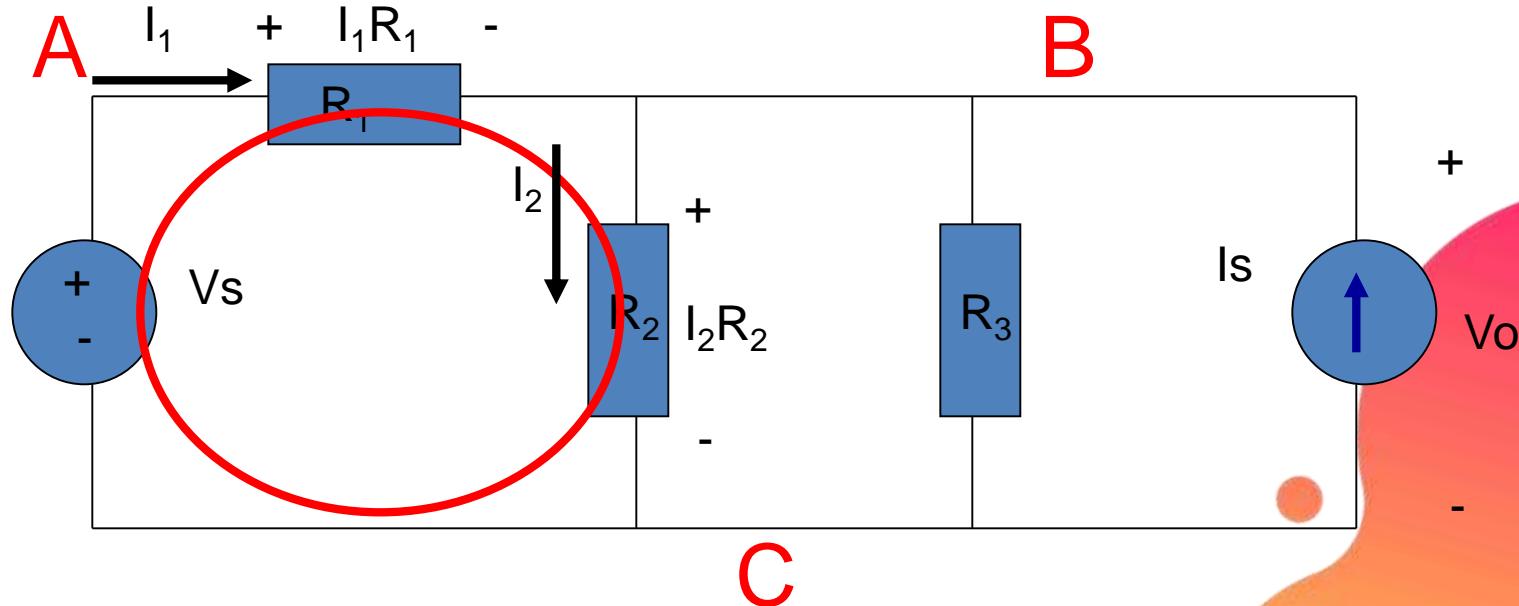

Kirchoff's Voltage Law (KVL):

- The algebraic sum of voltages around each loop is zero
- Σ voltage drops - Σ voltage rises = 0
- Or Σ voltage drops = Σ voltage rises

EXAMPLE

- Kirchoff's Voltage Law around 1st Loop

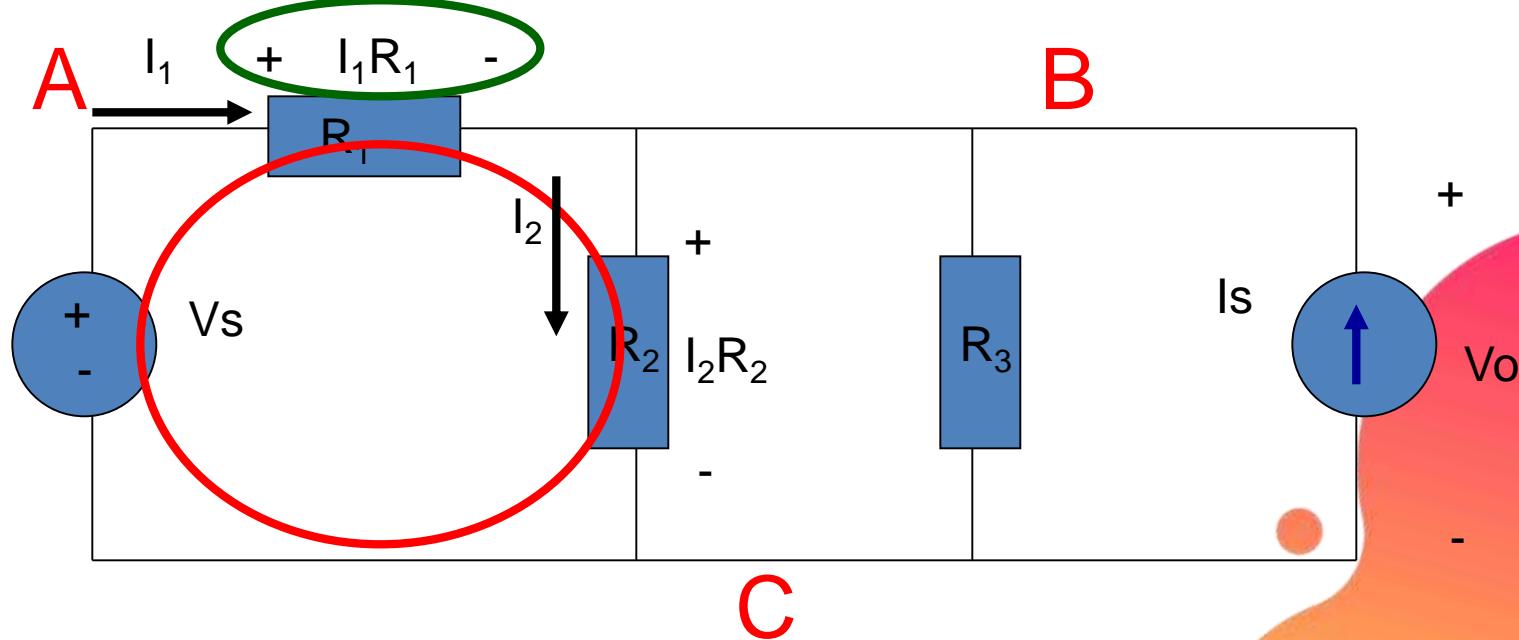

Assign current variables and directions

Use Ohm's law to assign voltages and polarities consistent with passive devices (current enters at the + side)

EXAMPLE

- Kirchoff's Voltage Law around 1st Loop

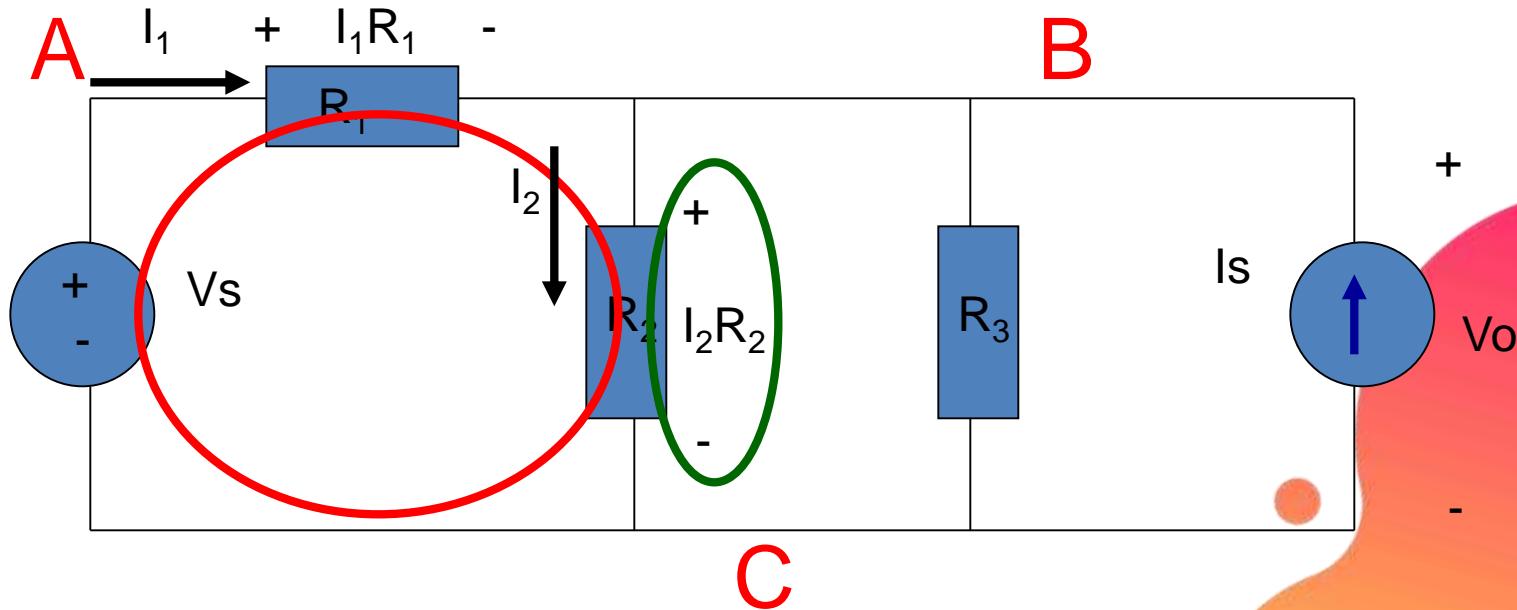

Starting at node A, add the 1st voltage drop: $+ I_1 R_1$

EXAMPLE

- Kirchoff's Voltage Law around 1st Loop

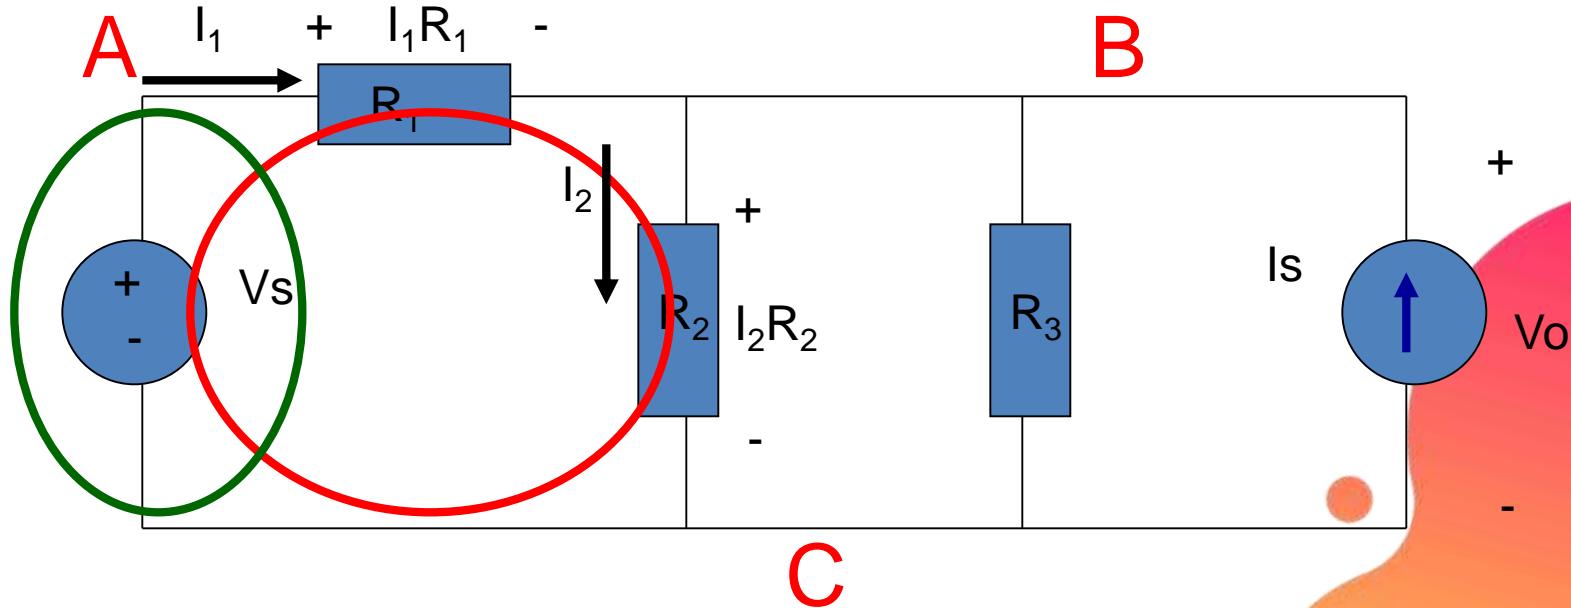

Add the voltage drop from B to C through R_2 : $+ I_1 R_1 + I_2 R_2$

EXAMPLE

- Kirchoff's Voltage Law around 1st Loop

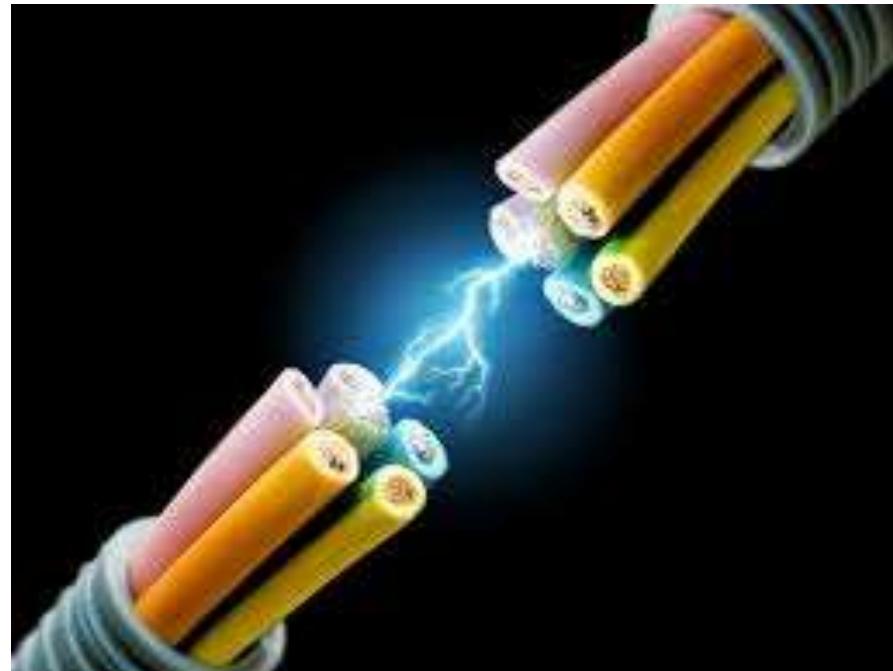

Subtract the voltage rise from C to A through V_s : $+ I_1 R_1 + I_2 R_2 - V_s = 0$

Notice that the sign of each term matches the polarity encountered 1st

RECAP....

...THANK YOU
