

Cell Division and Genetics

Across

3. Reproductive cells, egg and sperm
5. Describes body cells
7. Chromosomes are composed of _____
8. Cell division of gametes(reproductive cells)
9. Mitosis and Meiosis are examples of _____

Down

1. Chromosomes move to opposite poles of the cell
2. Last stage of division. 2 nuclei are formed.
4. Cell Cell division for (somatic)body cells
6. The separation of the two new cells
10. Nuclear membrane disappears during

- 12.** Contain genetic information as genes
- 13.** One of the two strands on a chromosome
- 14.** The cell that divides. source of new cells.
- 15.** Chromosomes appear to line up in the middle

-
- 11.** New cells produced in cell division
