

$$\tan \alpha_m = \tan \phi \quad \alpha_m = \phi$$

Angle of repose = angle of static friction.

Body on rough inclined plane

Q What should be the value of the angle θ so that motion of 390N block impends down the plane? The coefficient of friction $\mu = \frac{1}{3}$.

FBD of upper block

FBD of lower block

FBD of upper block

T \rightarrow tension of cable.

Resolving forces along plane

$$T - 130 \sin \theta - F_1 = 0$$

$$T - 130 \sin \theta - \mu N_1 = 0$$

$$T - 130 \sin \theta + \frac{1}{3} N_1 \rightarrow \text{--- (1)}$$

Resolving the force normal to plane

$$N_1 = 120 \cos \theta \rightarrow \text{--- (2)}$$

put (2) in (1)

$$T = 130 \sin \theta + \frac{1}{3} (120 \cos \theta)$$

$$T = 130 \sin \theta + 43.33 \cos \theta \rightarrow \text{--- (3)}$$

Consider FBD of lower block $\mu = 0.17$ $\mu \tan \theta = 0.17 \tan \theta$

Resolving forces along plane

$$F_1 + F_2 - 390 \sin \theta = 0$$

$$F_1 + F_2 = 390 \sin \theta$$

$$\mu N_1 + \mu N_2 = 390 \sin \theta$$

$$390 \sin \theta = \frac{1}{3} (130 \cos \theta + N_2) \rightarrow \textcircled{4}$$

Resolving forces normal to plane

$$N_2 - N_1 - 390 \cos \theta = 0$$

$$N_2 = 390 \cos \theta + N_1$$

$$N_2 = 390 \cos \theta + 130 \cos \theta = 520 \cos \theta$$

Sub N_2 in eqn $\textcircled{4}$

$$390 \sin \theta = \frac{1}{3} (130 \cos \theta + 520 \cos \theta)$$

$$390 \sin \theta = \frac{1}{3} (650 \cos \theta)$$

$$390 \sin \theta = 216.67 \cos \theta$$

$$\tan \theta = \frac{216.67}{390}$$

$$\theta = \tan^{-1} \left(\frac{216.67}{390} \right) = 29^\circ$$
