

SNS COLLEGE OF TECHNOLOGY

Coimbatore-35
An Autonomous Institution

Accredited by NBA – AICTE and Accredited by NAAC – UGC with 'A+' Grade
Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

DEPARTMENT OF MECHATRONICS

19MCB302– INDUSTRIAL ELECTRONICS & APPLICATION III YEAR V SEM

UNIT 1 – PHASE CONTROLLED CONVERTERS

TOPIC – Single Phase controlled Rectifier

Mr. M.Anand., M.E.,(Ph.D.,)

ASSISTANT PROFESSOR,

DEPARTMENT OF MECHATRONICS,

SNSCT, Coimbatore.

APPLICATION

SPEED CONTROL OF DC MOTORS BY USING RECTIFIER

By changing *the voltage or current* value in the *field or armature* of the DC Motor

DC Series Motor
DC Shunt Motor

Rectifier is a device which is used to convert the Fixed AC into Variable (Controlled DC)

RECTIFIER-Single Phase

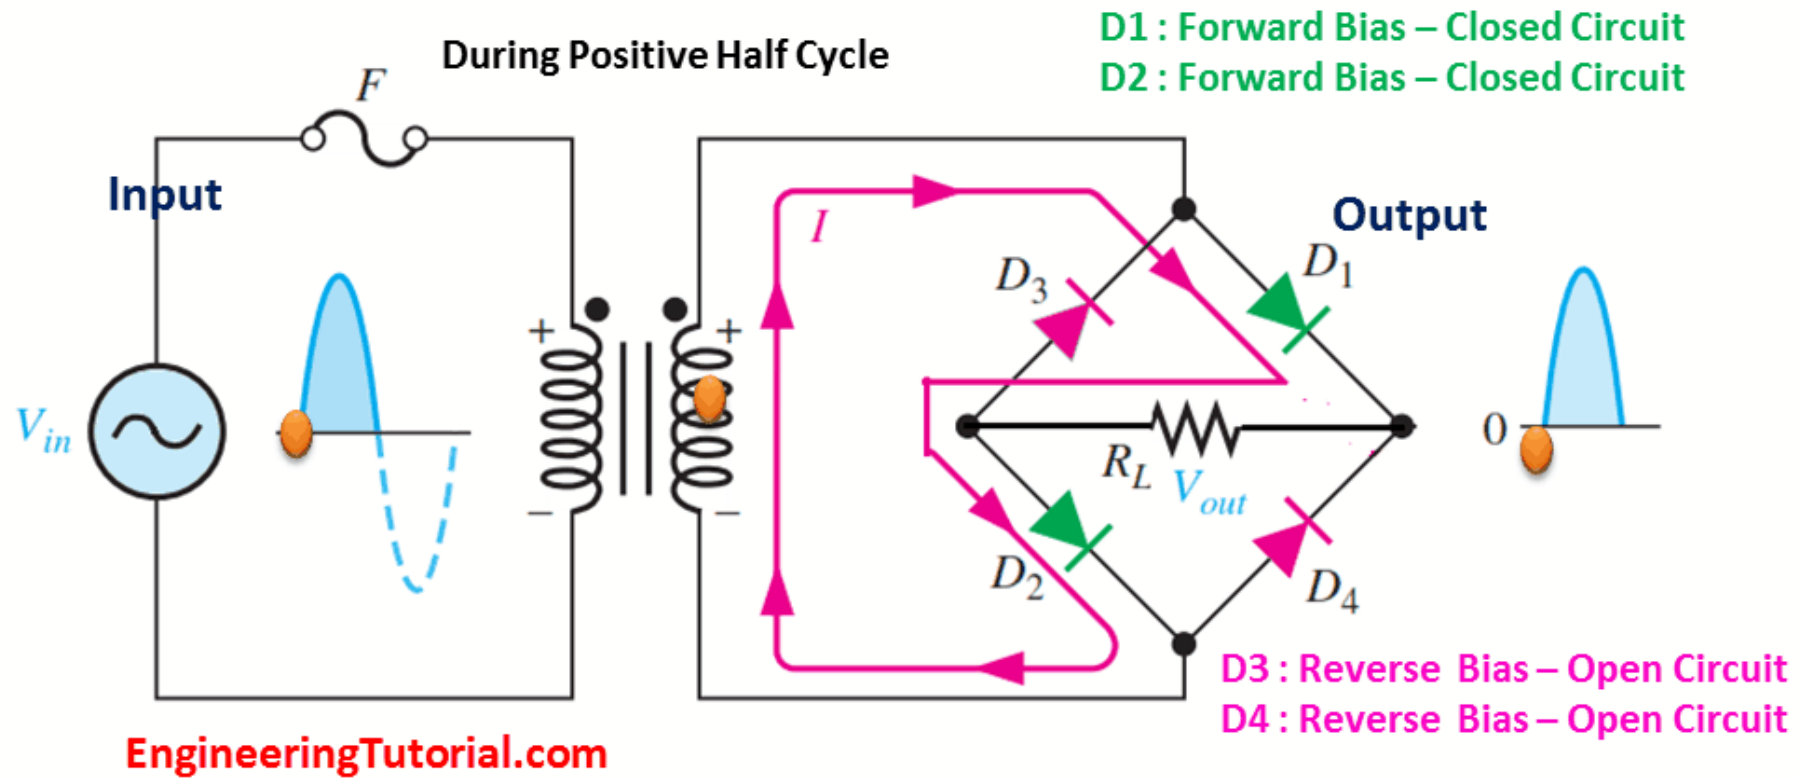

RECTIFIER-Three Phase

Bridge Full Wave Rectifier

Single phase controlled Converter

4 SCRs

controlled converter

Input

Single phase AC

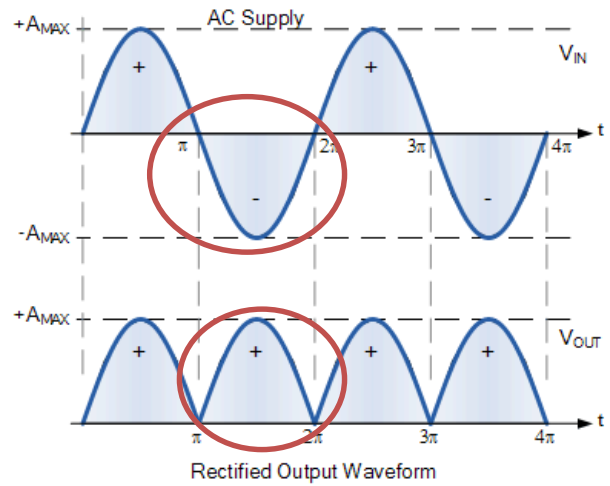

Output

controlled DC

Uncontrolled Rectifier

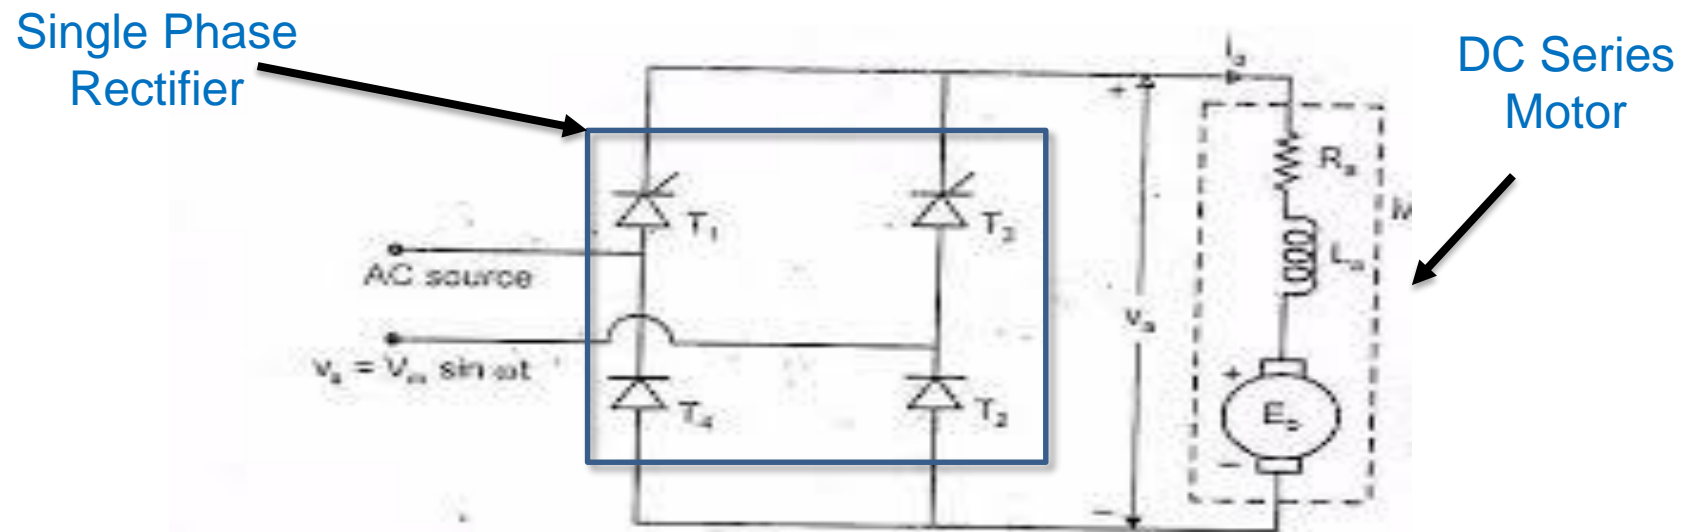

Controlled Rectifier

Waveforms

Speed control of DC Motor (Series) by Single phase RECTIFIER

Working

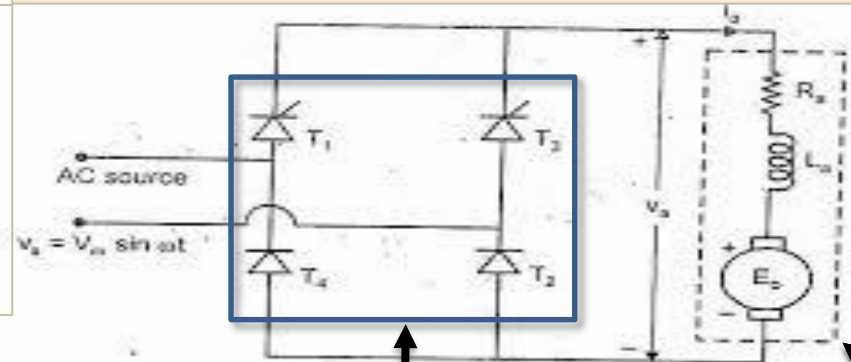

Speed control of DC Motor (Series) by Single phase RECTIFIER

Firing Angle

0 to 90 degree phase shift rectangle pulse – Generated by Function generator

Input

230 V
AC Supply
50 Hz
P, N

Output

0-230 V
DC Supply
+.-

How SCR Works

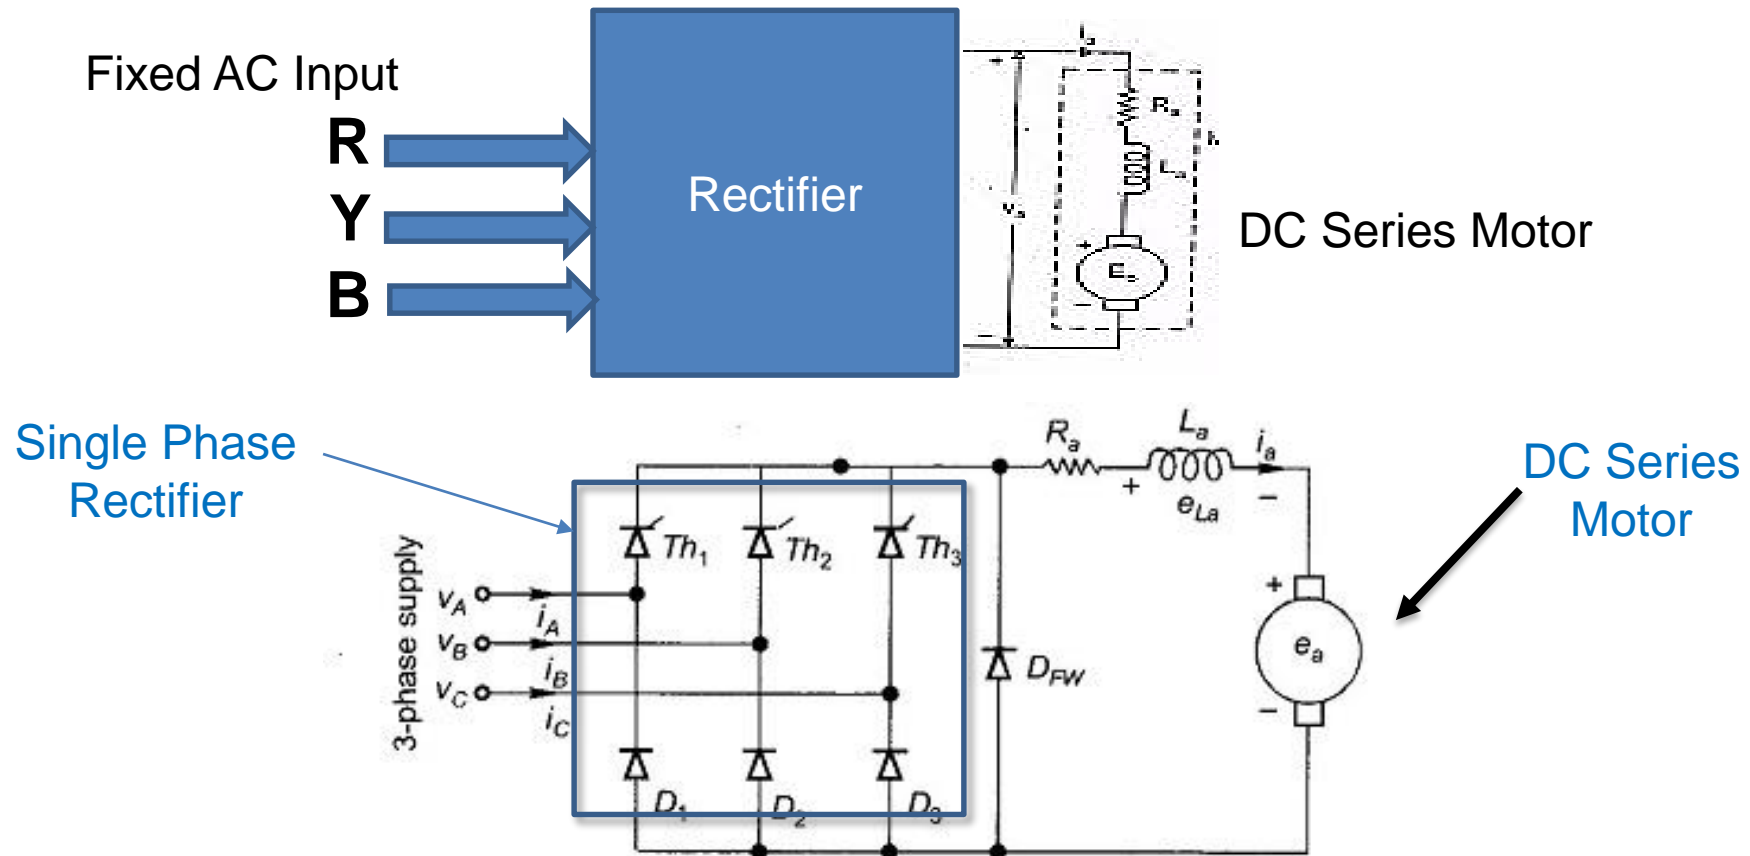

For SCR operation, We have to give the Firing angle (Small amount of voltage) Given to the SCR

- Single Phase Rectifier consist of 4 SCRs named T1, T2, T3 and T4
- It Converts the AC Volt into DC Volt (As Like Bridge Diode Rectifier Principle)
- Output Voltage controlled by changing the firing input given to the 4 SCR

Speed of the DC Series Motor can be vary by the changing the firing angle given to the SCR

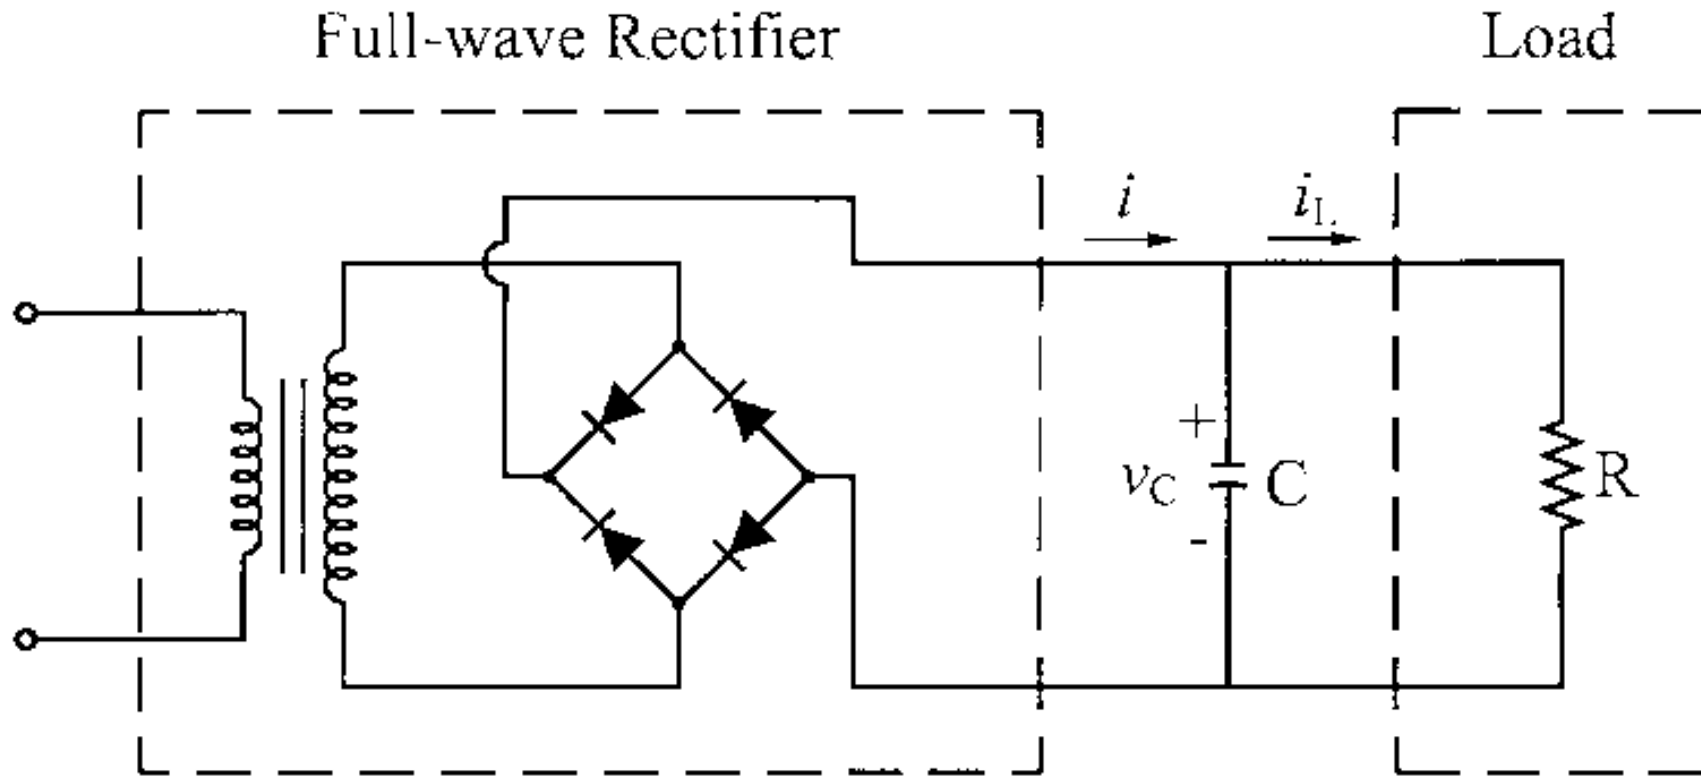

Speed control of DC Motor (Series) by Three phase RECTIFIER

ASSESSMENT

Find the Input & output of the following Circuit.
