## DATA SCIENCE - GENERAL CROSS WORD PUZZLE

## Across

- A statistical model that uses a logistic function to model a binary dependent variable
- A statistical analysis with an objective to assess the adequacy of a classification, given the group memberships
- 8. Test the hypothesis that the means of two or more independent groups are the same
- Plot used to determine number of components in a Principal Component Analysis
- 12. This branch of analysis (based on Fourier transforms) is used for investigating any cyclic components of a time series
- A collection fo random variables; key assumption of regression
- Often used to represent a series of events or transitions over time
- 15. Computational algorithms that rely on repeated random sampling to obtain numerical results
- Constructs a multitude of decision trees

## Down

- Any test or metric that relies on random sampling with replacement
- 2. Testing a claim or hypothesis about a parameter in a population, using data measured in a sample
- Means, medians, quantiles, etc.
- Package within R used to disseminate information within DfE
- Name of Analysis & Modelling G6
- 9. Checking the work meets a certain level of quality
- 11. Predict or estimate an event/figure in the future
