**UNIT - I MATRIX EIGENVALUE PROBLEM** 

Depn: -An assangement og mn elle in a rectangular form having on ordered set g m rows & n' estimons is called a man matrix  $A = \begin{bmatrix} a_{11} & a_{12} & \dots & a_{1n} \end{bmatrix}$  $\begin{bmatrix} a_{21} & a_{22} & \dots & a_{2n} \end{bmatrix}$  $\begin{bmatrix} a_{m_1} & a_{m_2} & \dots & a_{mn} \end{bmatrix}$ So short  $A = [a_{ij}] = (a_{ij}), i = 1, 2, ..., m; j = 1, 2, ..., n$ Here each aj is called an ell. of the matrin in the ithrows jth column. Characteristic Equation, Eigenvalues & Eigen Vectors. Eigen values & Eigen Voctors: \_\_\_\_ Let A= (aj.) be a square matern of order n by there exists a non-zero column vector X = [n2] and a scalar & g Ax= Ax Then A is called the Eigen values of A & X is called Eigen vectors corresponding to A. Characteristic Egn: - Ila languis man por more and

Let A be a square matrix of order n & I be its Eigen value. Let I be the unit matrix of order n. Then The 29n. IA-III=0 is called characteristic egn. of The matrin A.

UNIT - I MATRIX EIGENVALUE PROBLEM

Notes: (1) The determinant (A-2) is a poly. In 2 of degreen nand it is called the characteristic polynomial. (ii) solving the char. Egn. 1A-291=0, we yet 'n' values of A & these 'n' roots are E. Values (or, Latent roots (or) characteristic values q n. (iii) Corresponding to each value 37, the eqn. (A-2)x=0 ejèves a non-zero soln, vechos x called E. vector (or) Latent vector (or) char. vector to the E. Value of A. Method to find chas. Egn .: --Case (i): of A is a square matrin of order 2 then the chae. egn. of A is 1A-751=0 (or)  $\lambda^2 - s_1 \lambda + s_2 = 0$ where S, = Sum & main diagonal ells So = 1A)

## DEPARTMENT OF MATHEMATICS

UNIT - I MATRIX EIGENVALUE PROBLEM

B) Find the char. Eqn. 9 
$$\begin{bmatrix} 3 & -3 & 1 \\ 3 & 1 & 3 \\ -5 & 2 & -4 \end{bmatrix}$$
  
tet  $A = \begin{bmatrix} 2 & -3 & 17 \\ 3 & 1 & 3 \\ -5 & 2 & -4 \end{bmatrix}$   
The char eqn. 9  $A \stackrel{\circ}{}_{a} \stackrel{3}{}_{a} \stackrel{3}{}_{a} \stackrel{-3}{}_{a} \stackrel{-3}{}_{a}$ 

(An Autonomous Institution) Coimbatore – 35

DEPARTMENT OF MATHEMATICS

**UNIT - I MATRIX EIGENVALUE PROBLEM** 

Methods to find Evalues & Evoctors. Step 1:- TO find the char eqn. 1A-251=0 Step 2: TO gotive the char eqn. we cycle char roots called En Step 3: TO find Evectors, solve (A-25)x=0 for differents. Note: (to find Evector) (1) & all the three rows of matria 1A-251 are differents. then find colores of any row of the matria 1A-251 (1) & any his rows of matrin 1A-251 is same, then find the colores of any one of those two rows. (ii) & all the three rows are same than we take any one of those three rows. (iv) & any one of the rows.

UV) & any one of the raw is zero then find the expactor for zero the row.

23MAT101/ Matrices& Calculus
