Advantages of Adhoc and sensoc network.

The growth of 4G tech enhances anytime, anywhere, anyhow communication in adhoc network. Adhoc n/w is simple to design and install.

* Separation from central n/w administration
* Self configuration nodes also routers.
* Self healing through continous reconfi-yuration
* Scalability incorporates the addition of more diodes.
* mobility allows adhoc n/w created on the fly in any situation where there are multiple wireless devices
* flexible adhoc can be temporarily setup at any time, in any place

* Lower getting stated costs due to decentralized administration. The nodes in adhoc n/w need not rely on any hard ware and software. So it can be connected and communicated quickly.

Advtanges of sensor network.

* N/w setup can be carried out w/w fixed infrastructure.

* suitable for non-reachable places such as over the sea, moutains, rural areas or deep forests

* Flexible if there is random situation when additional workstation is needed

* Implementation pricing is cheap.

* It avoids plenty of wiring.

* It might accomodate new devices at anytime

* It's flexible to undergo physical partitions.

* It can be accessed by using a centralized monitor.
