

# Single Crystals; unit cell, crystal systems

### **o** SPACE LATTICE

- A lattice is a regular and periodic arrangement of points in three dimensions.
- It is defined as an infinite array of points in three dimensions in which every point has surroundings identical to that of every other point in the array.
- The Space lattice is otherwise called the Crystal lattice

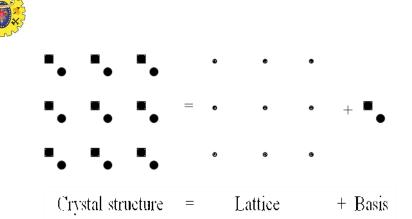

- Consider the points P, Q and R.
- Let us join the points P and Q by a straight line, and the point P and R by another straight line.
- The line PQ is taken as X-axis and the line PR is taken as Y-axis.
- The distance between any two successive lattice points in the X-direction is taken as `a'.
- Similarly, the distance between any two successive lattice points along the Y-direction is taken as 'b'.
- Here a and b are said to be lattice translational vectors. Consider a square lattice in which a=b.
- Consider two sets of points A, B, C, D, E, F and A, B, C, D, E, F.
- In these two sets, the surrounding environment looks symmetrical; i.e. the distances AB and A B, AC and A C, AD and A D, AE and A E and AF and A F are equal.
- Therefore, in the arrangement of points, if the surrounding environment looks the same when the arrangement is viewed from different lattice points, then that arrangement is said to be a space lattice.
  - **o BASIS:**
- A crystal structure is formed by associating every lattice point with an unit assembly of atoms or molecules identical in composition, arrangement and orientation. This unit assembly is called the **`basis**'.
- When the basis is repeated with correct periodicity in all directions, it gives the actual crystal structure. The crystal structure is real, while the lattice is

imaginary.

# **CRYSTAL STRUCTURE**

M.Sriram /Assistant professor /Department of Physics/SNSCT

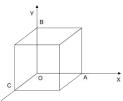

### **UNIT CELL**

A unit cell is defined as a fundamental building block of a crystal structure, which can generate the complete crystal by repeating its own dimensions in various directions.

# **CRYSTALLOGRAPHIC AXES:**

- Consider a unit cell consisting of three mutually perpendicular edges OA, OB and OC as shown in figure.
- Draw parallel lines along the three edges.
- **4** These lines are taken as crystallographic axes and they are denoted as X, Y and Z axes.

#### z 🖌

#### LATTICE PARAMETERS

- Consider the unit cell as shown in figure. Let OA, OB and OC are the intercepts made by the unit cell along X, Y and Z axes respectively.
- These intercepts are known as *primitives*. In crystallography the intercepts OA, OB and OC are represented as a, b and c.
- **4** The angle between X and Y axes is represented as .
- Similarly the angles between Y and Z and Z and X axes are denoted by and respectively as shown in the above figure. These angles, and are called as interaxial *angles or interfacial angles*.
- To represent a lattice, the three interfacial angles and their corresponding intercepts are essential. These six parameters are said to be *lattice parameters*.

#### **PRIMITIVE CELL:**

It is the smallest unit cell in volume constructed by primitives. It consists of only one full atom

A primitive cell is one, which has got the points or atoms only at the corners of the unit cell. If a unit cell consists of more than one atom, then it is not a primitive cell.

Example for primitive cell: Simple Cubic unit cell. Examples for non-primitive cell: BCC and FCC unit cell.

#### **CRYSTALS SYSTEMS:**

M.Sriram /Assistant professor /Department of Physics/SNSCT

- A three dimensional space lattice is generated by repeated translation of three translational vectors a, b and c.
- 4 Crystals are grouped under seven systems on the basis of the shape of the unit cell.
- ➡ The seven crystal systems are distinguished from one another by their lattice parameters. The seven systems are,
- 1. Cubic 2. Tetragonal 3. Orthorhombic 4.Trigonal (rhombohedral) 5. Hexagonal 6. Monoclinic and 7. Triclinic
- The space lattices formed by unit cells are marked by the following
- symbols. Primitive lattice: P having lattice points only at the corners of the unit cell.
- Body centred lattice: I having lattice points at the corners as well as at the body centre of the unit cell.
- Face centred lattice: F having lattice points at the corners as well as at the face centres of the unit cell.
- **4** Base centred lattice: C having lattice points at the corners as well as at the top and bottom base centres of the unit cell.
