

Need for Value Education

All human beings aspire for a happy, fulfilling life. For a human being, there are two important questions pertaining to this:

- What is my aspiration? (What to do?)
- How to fulfil my aspiration? (How to do?)

The purpose of education is to facilitate the development of clarity on the aspiration and adequate competence to actualize it.

For this, it is essential to understand what a happy, fulfilling and successful life is – what is really

valuable for human being; what is our purpose as a human being? Understanding human aspiration, or

what is really valuable for human being, is the value domain. The subject which enables us to understand

this domain is called ‘Value Education’ (VE). It enables us to understand our aspirations and visualise

our goals for a fulfilling life and indicates the direction for their fulfillment. In relation to these issues,

it also helps to remove our confusions and contradictions. In that sense, VE addresses the issues related to ‘what to do?’.

It is also necessary to learn the skills to actualise our aspirations. This is the skill domain. The subject

which enables us to learn the skills is called ‘Skill Development’ (SD). It enables us to learn the science,

technology, management and other skills for fulfilling our aspiration. In that sense, SD addresses the

issues related to ‘how to do?’.

Values and skills go hand in hand. Both values and skills are required. There is an essential

complementarity between the two. The priority is values, then skills; i.e. first understanding ‘what to

do’ and then developing the skills for ‘how to do’. And of course, checking if this results into a fulfilling life!

The present education system has largely become skill-biased. For developing skills, the prime

emphasis is on science and technology, without a base of values. Skills can only help to provide the

means to achieve what is considered valuable. It is not within the scope of science and technology to

provide a way to decide what really is valuable. The consequence of skill-biased education is clearly

visible in the form of serious crises at the individual, societal and environmental level.

Thus, there is a

strong need to rectify this situation. Value education is a crucial missing link in the present education

system.

But more importantly, the prime need of value education is to understand human aspirations, to discover

what is truly valuable in life; and work out the program for its fulfillment.
