

SNS COLLEGE OF TECHNOLOGY

(An Autonomous Institution)

COIMBATORE-35

Accredited by NBA-AICTE and Accredited by NAAC – UGC with A+ Grade
Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

UNIT 2

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

Modelling of Power System Components

19EET302 – Power System 1
III year / V Semester

INTRODUCTION

modelling of power system components

- Generator models
- Transformer model
- Transmission system model
- Load representation

Synchronous Machine Model

Three-phase equivalent circuit of a synchronous generator.

Single-phase equivalent circuit of a synchronous generator.

Synchronous Machine Model

1Φ equivalent circuit of generator

1Φ equivalent circuit of synchronous motor

Transformer Model

Equivalent circuit of a single-phase transformer

Simplified equivalent circuit of a single-phase transformer: (a) when referred to the primary side and (b) when referred to the secondary side.

Transformer Model

$$K = \frac{E_2}{E_1} = \frac{N_2}{N_1} = \frac{I_1}{I_2}$$

$$R_{01} = R_1 + R_2' = R_1 + \frac{R_2}{K^2} \quad \text{=Equivalent resistance referred to } 1^\circ$$

$$X_{01} = X_1 + X_2' = X_1 + \frac{X_2}{K^2} \quad \text{=Equivalent reactance referred to } 1^\circ$$

Transmission Line Model

T type

Π type

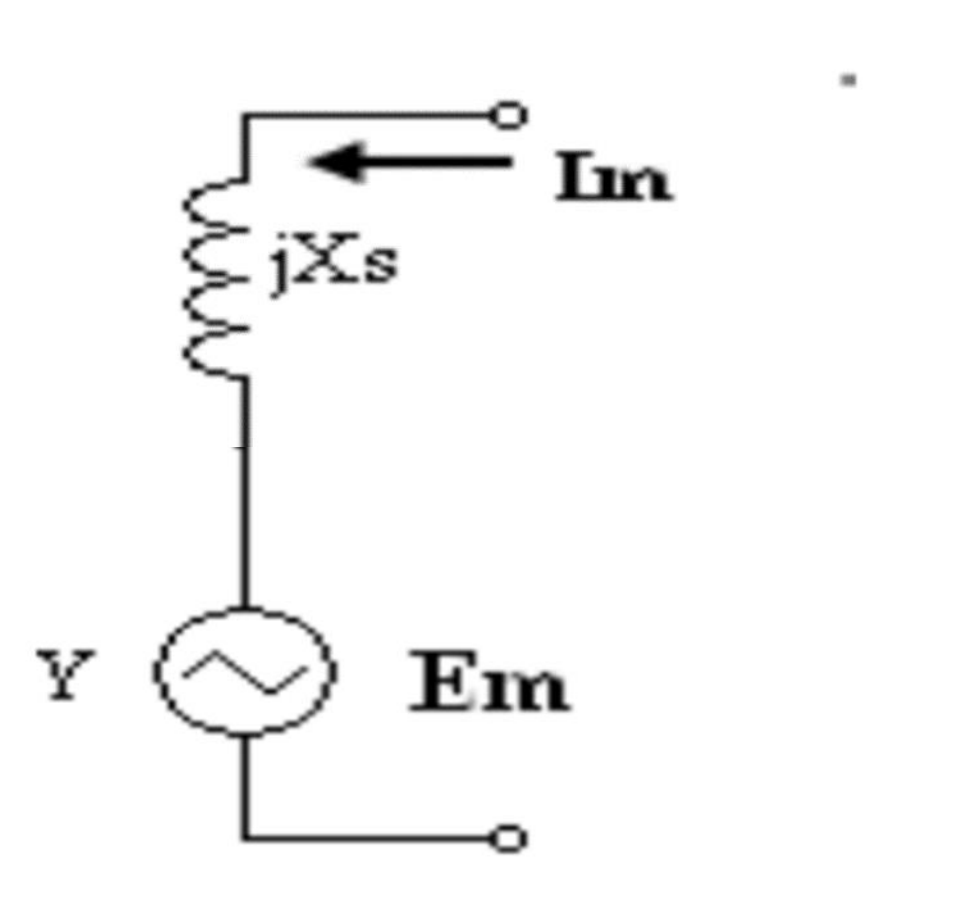

Representation of Loads

- Constant Impedance Representation
- Constant Power Representation
- Constant Current Representation

MODELLING OF INDUCTION MOTOR - Load

$R_r' \left(\frac{1}{s} - 1 \right)$ = Resistance representing load

$R = R_s + R_r'$ = Equivalent resistance referred to stator

$X = X_s + X_r'$ = Equivalent reactance referred to stator
