UNIT5–MultipleIntegrals

Change of order of integration.

① Change the order of integration for $\int_0^1 \int_0^x f(x,y)\,dx\,dy$
Solution:-

Given Integral is not in the correct order

let us rearrange it

$$I = \int_0^1 \int_0^x f(x,y)\,dy\,dx.$$

Given:- $y = 0$ to $y = x$
$x = 0$ to $x = 1$

Inner limit is w.r.t y

∴ It is a vertical strip

Now to change the order of integration

we have to draw a horizontal strip

x limits : $x = y$ to $x = 1$

y limits : $y = 0$ to $y = 1$

$$\therefore I = \int_0^1 \int_y^1 f(x,y)\,dx\,dy.$$

2. Change the order of integration in $\int_0^1 \int_0^y f(x,y)\,dx\,dy$
$I = \int_0^1 \int_0^y f(x,y)\,dx\,dy.$

Given limits:

x limit : $x = 0$ to $x = y$

y limit : $y = 0$ to $y = 1$

Inner limit is w.r.t 'x'
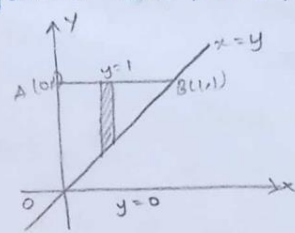

∴ Given limit is a horizontal strip

UNIT5–MultipleIntegrals

Now to change the order of integration we have to draw a vertical strip

x limit : $x=0$ to $x=1$

y limit : $y=x$ to $y=1$

$$I = \int_0^1 \int_x^1 f(x,y)\, dy\, dx.$$

3. Evaluate by changing the order of integration is $\int_0^4 \int_{x^2/4}^{2\sqrt{x}} dy\, dx$

Solution:-

$$I = \int_0^4 \int_{x^2/4}^{2\sqrt{x}} dy\, dx$$

Given limits:

x limits $x=0$ to $x=4$

y limits $y=\dfrac{x^2}{4}$ to $y=2\sqrt{x}$

(e) $x^2=4y$ to $y^2=4x$

Inner limit is wrt 'y'

∴ It is a vertical strip

To find point A:

Solving $x^2=4y$ and $y^2=4x$

$\quad\quad\quad\quad \hookrightarrow ① \quad\quad\quad\quad \hookrightarrow ②$

$x^2=4y$

Squaring, $x^4 = 16y^2$

$x^4 = 16(4x)$ using ②

$x^4 = 64x$

$x^3 = 64$

$\boxed{x=4}$

$A(4,4)$.

Sub x in ②

$y^2=4x$

$y^2=4(4)$

$y^2 = 16$

$\boxed{y=4}$

UNIT5–MultipleIntegrals

Now to change the order of integration draw a horizontal strip

x limits :

$$x = \frac{y^2}{4} \quad to \quad x = 2\sqrt{y}$$

$$y = 0 \quad to \quad y = 4$$

$$\therefore I = \int_{0}^{4} \int_{y^2/4}^{2\sqrt{y}} dx\, dy$$

$$= \int_{0}^{4} \int_{y^2/4}^{2\sqrt{y}} [x]_{y^2/4}^{2\sqrt{y}} dy \qquad = \int_{0}^{4} [2\sqrt{y} - y^2/4]\, dy$$

$$= \left[\frac{2y^{3/2}}{3/2} - \frac{1}{4}\frac{y^3}{3} \right]_{0}^{4}$$

$$= \left[\frac{2(4)^{3/2}}{3/2} - \frac{1}{4}\frac{(4)^3}{3} \right]$$

$$= \left[\frac{4}{3}(8) - \frac{16}{3} \right] = \frac{32-16}{3}$$

$$I = \frac{16}{3}$$

4. Change the order of integration in $\int_{0}^{a} \int_{x^2/a}^{2a-x} xy\, dy\, dx$ and then evaluate. $\frac{3}{8} a^4$

The region of integration R is bounded by the curve $y = \frac{x^2}{a}$ ie. the parabola $x^2 = ay$, the line $y = 2a-x$, ie $x+y = 2a$ and the lines $x=0$ and $x=a$.
