•SEVEN RULES

•ACTIVITY

•EXAMPLES

•SUMMARY

### **INTRODUCTION**

- •It consists of a single block or a combination of blocks.
- •These are used to represent the control systems in pictorial form.
- •Signal into the block represents the input  $\mathbf{R}(\mathbf{s})$  and signal out of block represents output  $\mathbf{C}(\mathbf{s})$ , while the block itself stands for the transfer function  $\mathbf{G}(\mathbf{s})$ .
- •Flow of information is unidirectional, output being equal to input multiplied by the transfer function of the block.

# NEED FOR BLOCK DIAGRAM REDUCTION

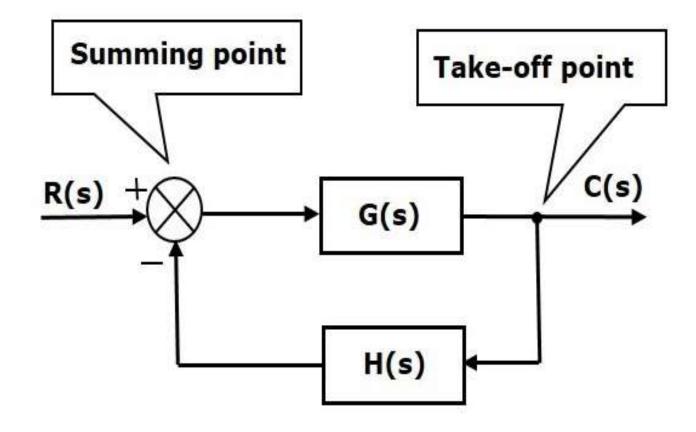

It is normally required to reduce multiple blocks into single block or for convenient understanding it may sometimes required to rearrange the blocks from its original order.

For the calculation of Transfer function its required to be reduced.

### BASIC ELEMENTS OF BLOCK DIAGRAM

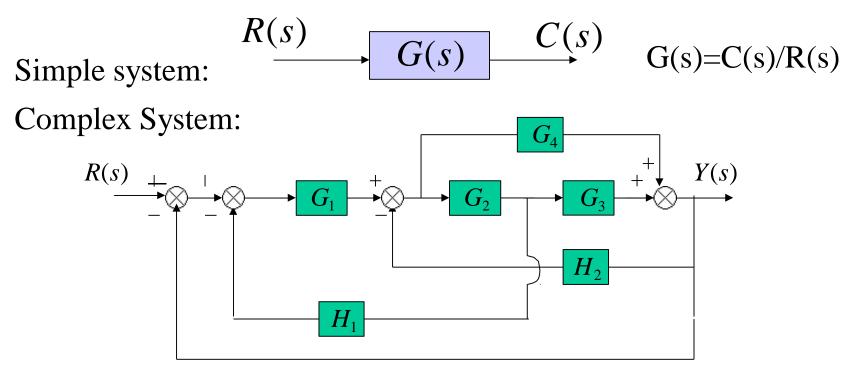

## **BLOCK DIAGRAM**

A Block diagram is basically modelling of any simple or complex system. It Consists of multiple Blocks connected together to represent a system to explain how it is functioning

Transfer Function: Ratio between transformation of output to the transformation of input when all the initial conditions are zero.

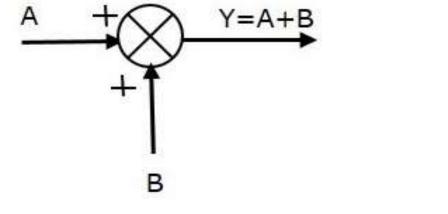

### BASIC ELEMENTS OF BLOCK DIAGRAM

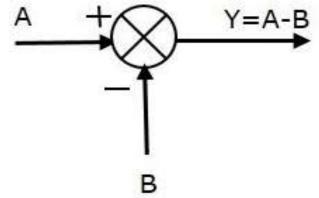

• Block

$$\begin{array}{c} X(s) \\ \hline \\ G(s) \\ \hline \\ \end{array} \begin{array}{c} Y(s) \\ \hline \\ Y(s) \\ \hline \\ \end{array} \\ \end{array} \begin{array}{c} Y(s) \\ F(s) \\ \hline \\ Y(s) \\ \end{array} \end{array}$$

• Summing Point

## BLOCK DIAGRAM REDUCTION TECHNIQUE...

### **GROUP DISCUSSION**

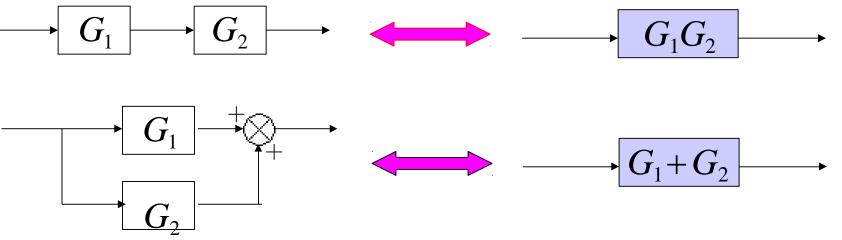

19ECT212/Control Systems/Unit 1/Dr.S.Pradeep/AP/ECE

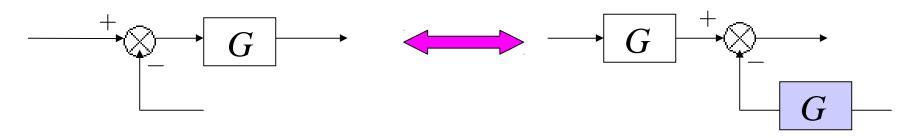

# BLOCK DIAGRAM REDUCTION TECHNIQUE...

1. Combining blocks which are in cascade or in parallel

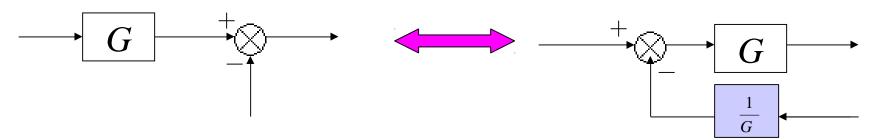

2. Moving a summing point behind a block

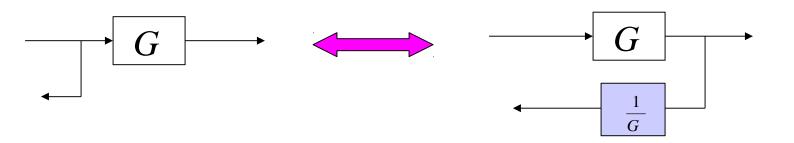

#### 3. Moving a summing point ahead of a block

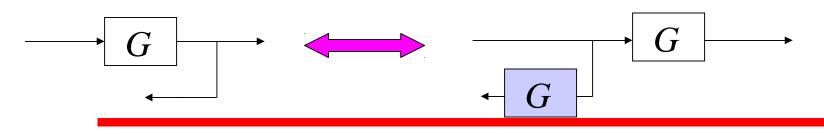

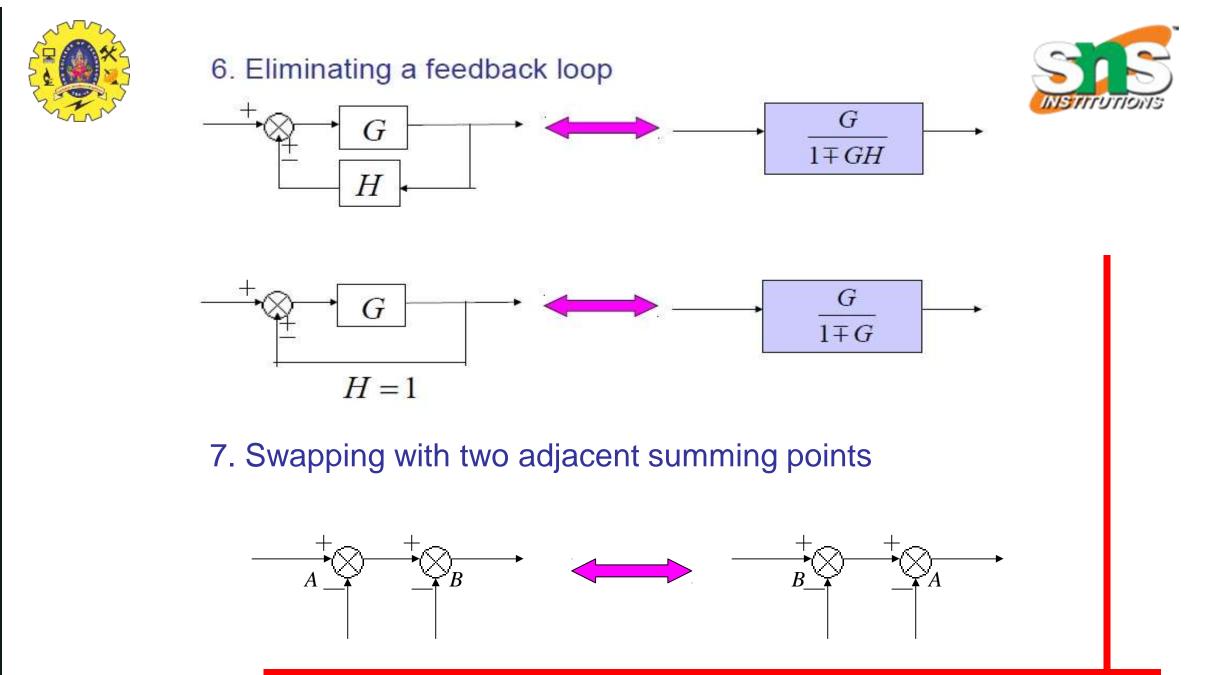

#### 4. Moving a pickoff point behind a block

5. Moving a pickoff point ahead of a block

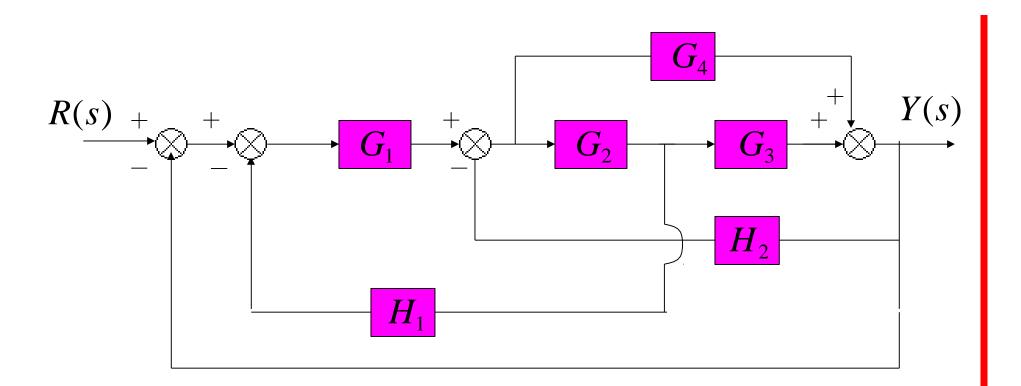

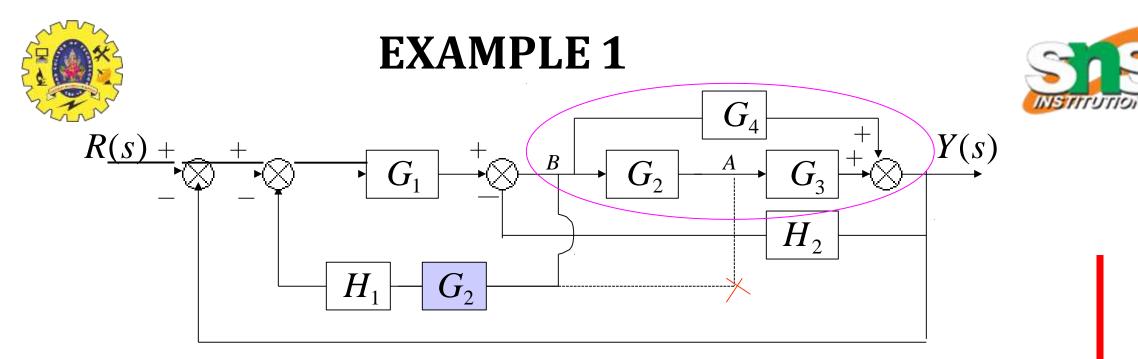

### **EXAMPLE 1**

(a) Find the transfer function of the following block diagrams

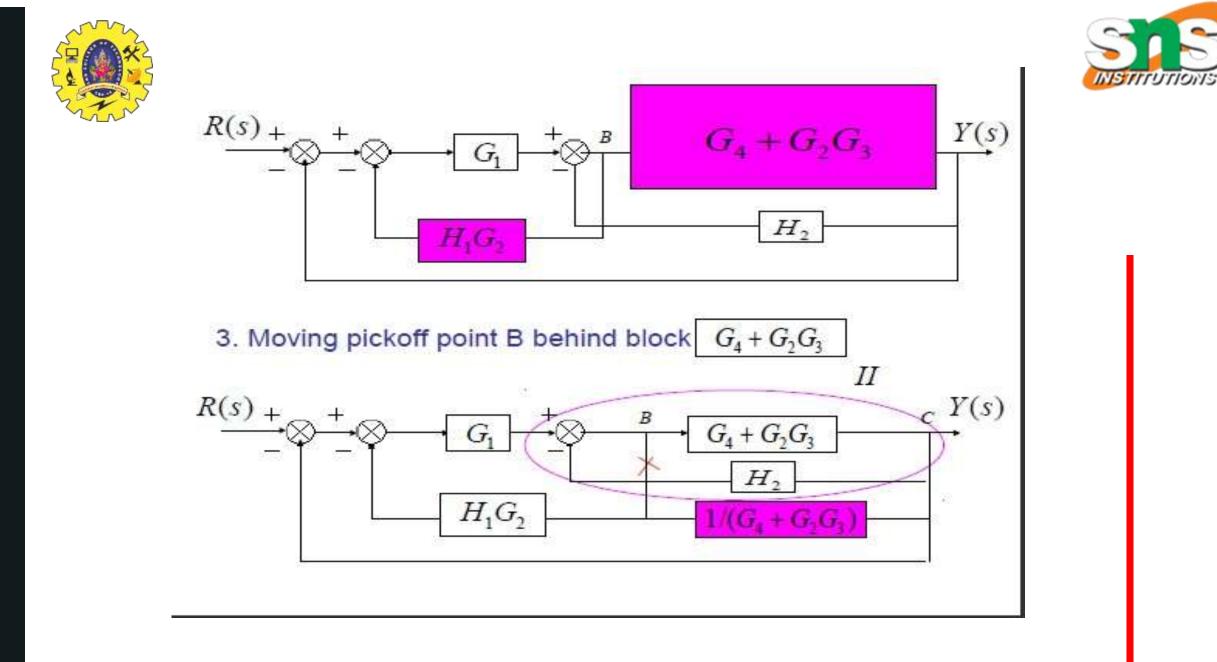

Solution:

- 1. Apply the rule that Moving pickoff/takeoff point ahead of block
- 2. Eliminate loop I & simplify as

 $G_2$ 

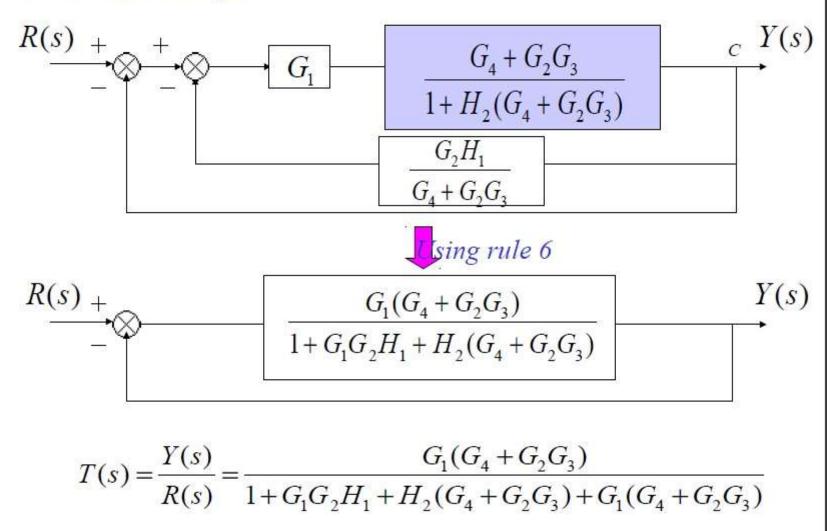

$$\xrightarrow{B} G_4 + G_2 G_3$$

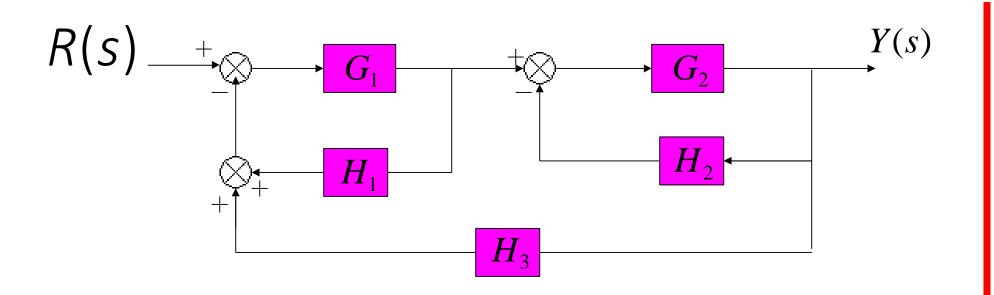

#### 4. Eliminate loop III

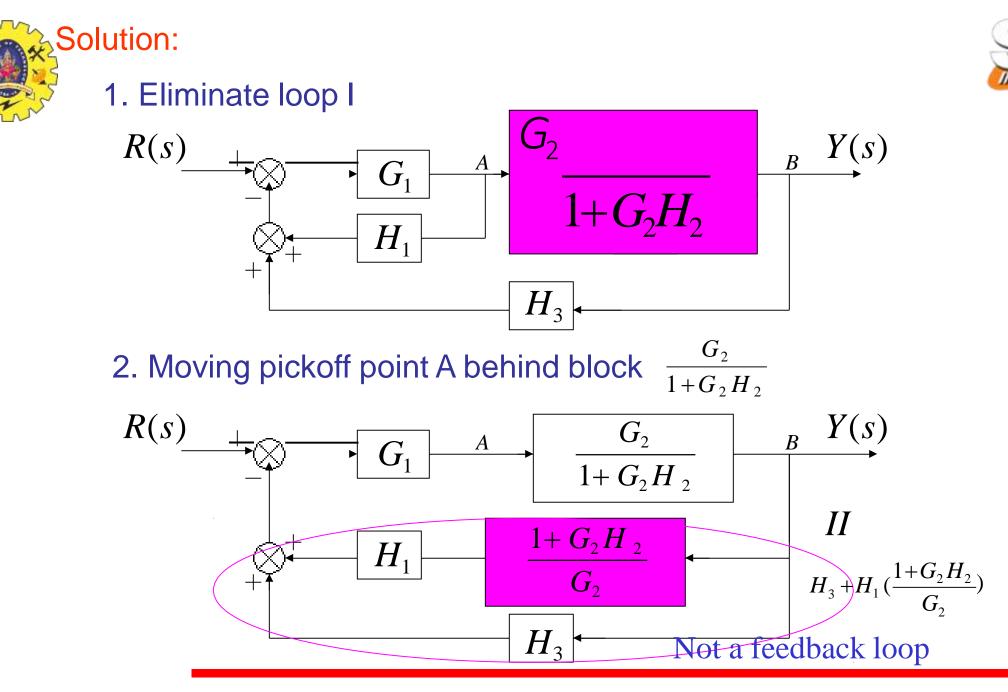

**(**b**)** 

#### 3. Eliminate loop II Y(s)R(s) $G_1G_2$ $1+G_2H_2$ $H_1(1+G_2H_2)$ $H_{3} +$ $G_{c}$ Use rule 6 $G_1G_2$ $\underline{\mathbf{r}(s)}$ T(s) = $= \frac{1}{1 + G_2 H_2 + G_1 G_2 H_3 + G_1 H_1 + G_1 G_2 H_1 H_2}$ R(s)
