POISSON DISTRIBUTION

Poisson distribution:

A random variable x is said to follow Poisson distribution, if it assume only non negative values of its probability mass function is given by,

$$P[X=x] = \frac{e^{-\lambda} \lambda^x}{x!}, \quad x=0 \text{ to } \infty \text{ and where } \lambda \text{ is a parameter, } \lambda = np.$$

Property:

* Binomial distribution is a limiting case of Poisson distribution.

* $n \rightarrow \infty, p \rightarrow 0$

MGF, mean and variance of Poisson distribution:

MGF:

$$\begin{aligned} M_x(t) &= \sum_{x=0}^{\infty} e^{tx} p(x) \\ &= \sum_{x=0}^{\infty} e^{tx} \frac{e^{-\lambda} \lambda^x}{x!} \\ &= e^{-\lambda} \sum_{x=0}^{\infty} \frac{e^{tx} \lambda^x}{x!} \\ &= e^{-\lambda} \sum_{x=0}^{\infty} \frac{(\lambda e^t)^x}{x!} \\ &= e^{-\lambda} \left[\frac{(\lambda e^t)^0}{0!} + \frac{(\lambda e^t)^1}{1!} + \frac{(\lambda e^t)^2}{2!} + \dots \right] \\ &= e^{-\lambda} \left[1 + \frac{\lambda e^t}{1!} + \frac{(\lambda e^t)^2}{2!} + \dots \right] \\ &= e^{-\lambda} \left[e^{e^t \lambda} \right] \quad \left[\because e^x = 1 + \frac{x}{1!} + \frac{x^2}{2!} + \dots \right] \\ &= e^{-\lambda + \lambda e^t} \end{aligned}$$

$$E(x) = \lambda$$

Variance:

$$\text{var}(x) = E(x^2) - [E(x)]^2$$

$$E(x^2) = \left[\frac{d^2}{dt^2} m_x(t) \right]_{t=0}$$

Q. If a poisson variate $P(x=2) = 9 P(x=4) + 90 P(x=6)$.
Find mean and variance.

Soln.

$$P.D: P(x=x) = \frac{e^{-\lambda} \lambda^x}{x!}$$

$$\text{Given, } P(x=2) = 9 P(x=4) + 90 P(x=6)$$

$$\frac{e^{-\lambda} \lambda^2}{2!} = 9 \frac{e^{-\lambda} \lambda^4}{4!} + 90 \frac{e^{-\lambda} \lambda^6}{6!}$$

$$\div e^{-\lambda} \quad \frac{\lambda^2}{2} = \frac{9\lambda^4}{24} + \frac{90\lambda^6}{720}$$

$$\div \lambda^2 \quad \frac{1}{2} = \frac{9\lambda^2}{24} + \frac{90\lambda^4}{720}$$

$$\frac{1}{2} = \frac{3\lambda^2}{8} + \frac{\lambda^4}{8}$$

$$\lambda^4 + 3\lambda^2 = 4$$

$$\lambda^4 + 3\lambda^2 - 4 = 0$$
