19MAT204 – PROBABILITY AND STATISTICS

---

## PART-B

1. Derive Binomial distribution and hence deduce its mean and variance.
2. Derive the MGF of Poisson distribution and hence deduce its mean and variance.
3. Derive the MGF of uniform distribution and hence deduce its mean and variance.
4. Derive the MGF of exponential distribution and hence deduce its mean and variance.
5. . State and prove memoryless property of exponential distribution.
6. 4 coins were tossed simultaneously. What is the probability of getting (i) 2 heads (ii) atleast 2 heads (iii) at most 2 heads.
7. A pair of dice is thrown 4 times. If getting a doublet is considered a success, find the probability of 2 successes.
8. If 10% of the screws produced by an automatic machine are defective, find the probability that out of 20 screws selected

## 19MAT204 – PROBABILITY AND STATISTICS

---

- at random, there are (i) exactly 2 defective (ii) Atmost 3 defective (iii) Atleast 2 defectives
9. In a large consignment of electric bulbs 10% are defective. A random sample of 20 is taken for inspection. Find the probability that (i) All are good bulbs, (ii) Atmost there are 3 defective bulbs (iii) Exactly there are three defective bulbs.
10. A manufacturer of pins knows that 2% of his products are defective. If he sells pins in boxes of 100 and guarantees that not more than 4 pins will be defective what is the probability that a box will fail to meet the guaranteed quality? ( $e^{-2} = 0.13534$ )
11. If  $X$  is a Poisson variate  
 $P(X = 2) = 9P(X = 4) + 90P(X = 6)$ , find (i) mean of  $X$  (ii) variance of  $X$ .
12. Buses arrive at a specified stop at 15 minute intervals starting at 7 a.m. If a passenger arrives at the stop at a time that is uniformly distributed between 7 and 7.30 a.m. Find the probability that he waits (a) less than 5 minutes for a bus (b) more than 10 minutes for a bus.
13. The time (in hours) required to repair a machine is exponentially distributed with parameter  $\lambda = 1/2$ .

19MAT204 – PROBABILITY AND STATISTICS

---

What is the probability that the repair time

- (a) exceeds 2 hours
  - (b) exceeds 5 hours
14. The marks obtained by a number of students in a certain subject are approximately normally distributed with mean 65 and S.D. 5. If 3 students are selected at random from this group, what is the probability that atleast one of them would have scored above 75? (Given the area between  $z=0$  and  $z=2$  under the standard normal curve is 0.4772) .
15. The weekly wages of 1000 workmen are normally distributed around a mean of Rs.70 with a S.D. of Rs.5. Estimate the number of workers whose weekly wages will be (i) between Rs.69 and Rs.72 (ii) less than Rs.69 (iii) more than Rs.72.
