UNIT-III PARTIAL DIFFERENTIAL EQUATIONS

Lagrange's Linear Equation-Method of Multipliers

method of maltipliers:

choose any 3 multipleer 1, m, n which may no constant (or) functions of 2, y, z, then

 $\frac{dx}{p} = \frac{dy}{a} = \frac{dx}{R} = \frac{dx + mdy + ndx}{4p + ma + nR}$

If It is possible to choose l, m, n such that lP+mQ+nR=0, then ldx+mdy+ndz=0 Prect 9ntegration gives $u(x,y,x)=C_1$ Direct 9ntegration gives $u(x,y,x)=C_1$ illy choose another set of 3 multipliers l', m' and $u'(x,y,x)=C_2$
